Lancaster Farming

Serving The Central and Southeastern Pennsylvania Areas

Vol. 20 No. 19 | Lancaster Farming, Saturday, March 22, 1975 | $3.00 Per Year

A group of grape growers braved howling winds to watch Dr. Carl Haesler, kneeling, give a pruning demonstration in the young vineyard of Robert Hummer, Manheim. Haesler clipped and quipped his way through a dozen vines before the group moved to the Raymond Stoner farm, just outside Lancaster, for a look at some more mature vines.

Farmers Eyeing Corn Cut Back

By Dick Wanner

Jon Wefald, Minnesota's fiery Commissioner of Agriculture, is spearheading a drive by Midwestern corn growers to cut back the national corn crop by 10 to 20 percent. Facing the Spectre of $2 corn, producers in the Midwest are listening to Wefald, and many of them have signed pledges stating that they will cut back.

Wefald spoke to a group of Iowa farmers at the University of Iowa in Ames on Thursday. The crowd was estimated at between 4000 and 5000 people. One of the people at that meeting was Robert Lounsberry, the Iowa Secretary of Agriculture. Lounsberry told Lancaster Farming on Friday morning that many Iowa farmers are thinking about cutting back. "But you've got to remember, a lot of fellows already have their fields plowed and fertilized. They've got the investment in the ground, and it's going to be awfully tough to let it sit idle.

"I'm in favor of cutting back on corn, but I don't think we ought to reduce our total food production," movement leaders would still a lot of hungry people in this world. If we take land out of corn, I think it ought to go into legumes or some other crop."

Wefald was expected to convene another massive meeting of farmers yesterday (Friday), at the University of Minnesota. One of the scheduled guests for that meeting was Pennsylvania Secretary of Agriculture James A McHale.

Pennsylvania farmers have apparently not shown much interest so far in cutting back on corn or anything else. But there are exceptions. One of those is Eugene Sellers, a Lycoming County dairyman who spent half-an-hour last Friday afternoon in McHale's Harrisburg office. Sellers told the secretary what he'd like to see the state's farmers doing this year.

Sellers said he'd like to see a 10 percent cutback in all farm commodities, but primarily in crops. He feels 20 percent of the land should be taken out of production. These two steps would be supplemented by an austerity program in which farmers would apply only absolutely necessary amounts of lime and fertilizer and get by with the machinery they have now.

The effect of a cutback on farmers in the Keystone state would be difficult to assess. William Balderston, one of the state's biggest corn producers, said he hasn't heard much at all about cutting back. He said he plans to plant 900 acres of corn again this year, about the same as his 1974 crop, on his rented ground near Downingtown in Chester

County Miss Selected IFYE to Germany

Although Fay Stoner won't be leaving for Germany until June, she is already preparing for her role as an International Farm Youth Exchange representative from the United States.

The Lancaster County Miss was an active 4-H member in the area until beginning her college career at Millersville State College, where she is presently a junior majoring in psychology. As a 4-Her, Fay was a member of the Lancaster County Wildlife Club and the Lititz-Manheim 4-H Community Club taking strawberries, rabbits, flowers and gardening as her projects.

A graduate of Manheim Township High School, Fay was also active in the school band, in gymnastics and also in the ski club.

When asked how she had become interested in the IFYE program, Fay commented on her decision.

"A neighbor told me that Lancaster County was searching for an IFYE candidate and after some thought, I decided to apply."

"I wanted to learn another language and thought that the IFYE program would offer a good opportunity along with learning about other people in the world."

Since Fay had taken German in high school and also in college her preference naturally went to that country.

"I had German in High School and in college and thought that it would be of a help to me. I was glad to be accepted in that country."

Fay applied for the IFYE program in September and following questionaires

Fay Stoner, 1051 Eden Rd., Lancaster, will be leaving for Germany in June as an International Farm Youth Exchange representative from Pennsylvania.

Grape Marketing Plan Presented to Growers

By Dick Wanner

A marketing program to encourage the use of Pennsylvania wine grapes was outlined Thursday afternoon to about 30 grape growers attending the annual Lancaster County spring grape meeting in the Farm and Home Center.

Ray Reiter, a marketing specialist with the Pennsylvania Department of Agriculture, told the group that Pennsylvania apple growers have been operating a program for the past seven years, and the state's red cherry growers began a similar one last year.

A former fruit grower himself, Reiter outlined the steps the growers would have to take if they wanted to start a program with state assistance. He noted that the red cherry growers started their program after a voluntary system of collecting funds had failed. Under the voluntary setup, only 10 percent of the growers had been contributing. Now all the growers who send any amount of cherries to processors are in the program.

Reiter said if the grape growers wanted to start a marketing program, they would first have to decide who should be included, how many people they wanted on their advisory board, how much money they wanted to collect, what they wanted to use the money for, and how the funds would be collected.

Under a marketing program operated by the department of agriculture, money collected from growers can be used for advertising and promotion, research, or the dissemination of marketing information.

"When the red cherry people were first talking about this program," Reiter told the group, "they were concerned that because state collects the money, the state would run the program. This does not happen. All the money goes into a special account, and only the advisory board - which is composed entirely of producers - can get the money out of the account."

Last year the cherry producers, Reiter noted, collected some $11,000. Most of the money went to the national red cherry

Philadelphia Eggs

Wednesday, March 19

Prices unchanged. Cartoning demand light and disappointing for pre-holiday needs. Offerings ample to burdensome and occasionally freely made. Undertone very unsettled.

Prices to retailers: sales to volume buyers, consumer grades white eggs in cartons, delivered: Store door A Extra Large 67-69½; A Large 66-68½; A Medium 58-60½.

NEST RUN EGGS

Prices are from Egg Clearinghouse, Inc., (ECI) Durham, N.H. and reflect trading prices for gradeable nest run eggs (GNR) on ECI, a nationwide trading center for producers, packers and marketers. GNR eggs are classified by weight in 30-dozen cases, and traded in lots of either 300 or 750 cases. Prices are FOB buyers dock, and are computed Tuesday and Thursday of each week. This week's prices for each classification were:

Classification	New Weight Per Case	Tuesday	Thursday
Extra Large	51 lbs.	0	0
Class 1 - Large	48 lbs.	54	52
Class 3 - Medium	42 lbs.	48	46
Class 4 - Small	39 lbs.	33	31
Breaking Stock	48 lbs.	40	40
Checks	48 lbs.	32	32

Delmarva

Broiler-Fryer Market
Wednesday, March 19

Ready to cook movement light and disappointing. Slaughter schedules reduced in many quarters. Today's less than trucklot asking prices 1 - 2 cents lower on both Plant and US Grade A. Advance interest light at 39 cents. Live supplies ample with weights in a wide range. Undertone unsettled.

Negotiated trucklot prices 2-3 lb. ready to cook broiler-fryers for delivery next week: Plant Grade 39.

Current broiler-fryer negotiated prices for immediate delivery mostly multiple-drop shipments to New York City from Delmarva.

Range: US Grade A 40½-42; Plant Grade 39½-41; Premium US Grade A 42-46; Premium Plant Grade 41-44. Wtd. Avg.: US Grade A 41.15; Plant Grade 39.89; Premium US Grade A 45.09; Premium Plant Grade 43.19.

Eastern Pa. & N. J.

Live Poultry Report
Wednesday, March 19

Prices continue unchanged on light type hens. Offerings light as producers hold for additional production prior to the holiday. Offerings of heavy type adequate for a fair demand.

Prices paid at farm: Light type hens 4-5½, mostly 5-5½ in PA; mostly 5-5½ in NJ. Heavy type hens TFEWR.

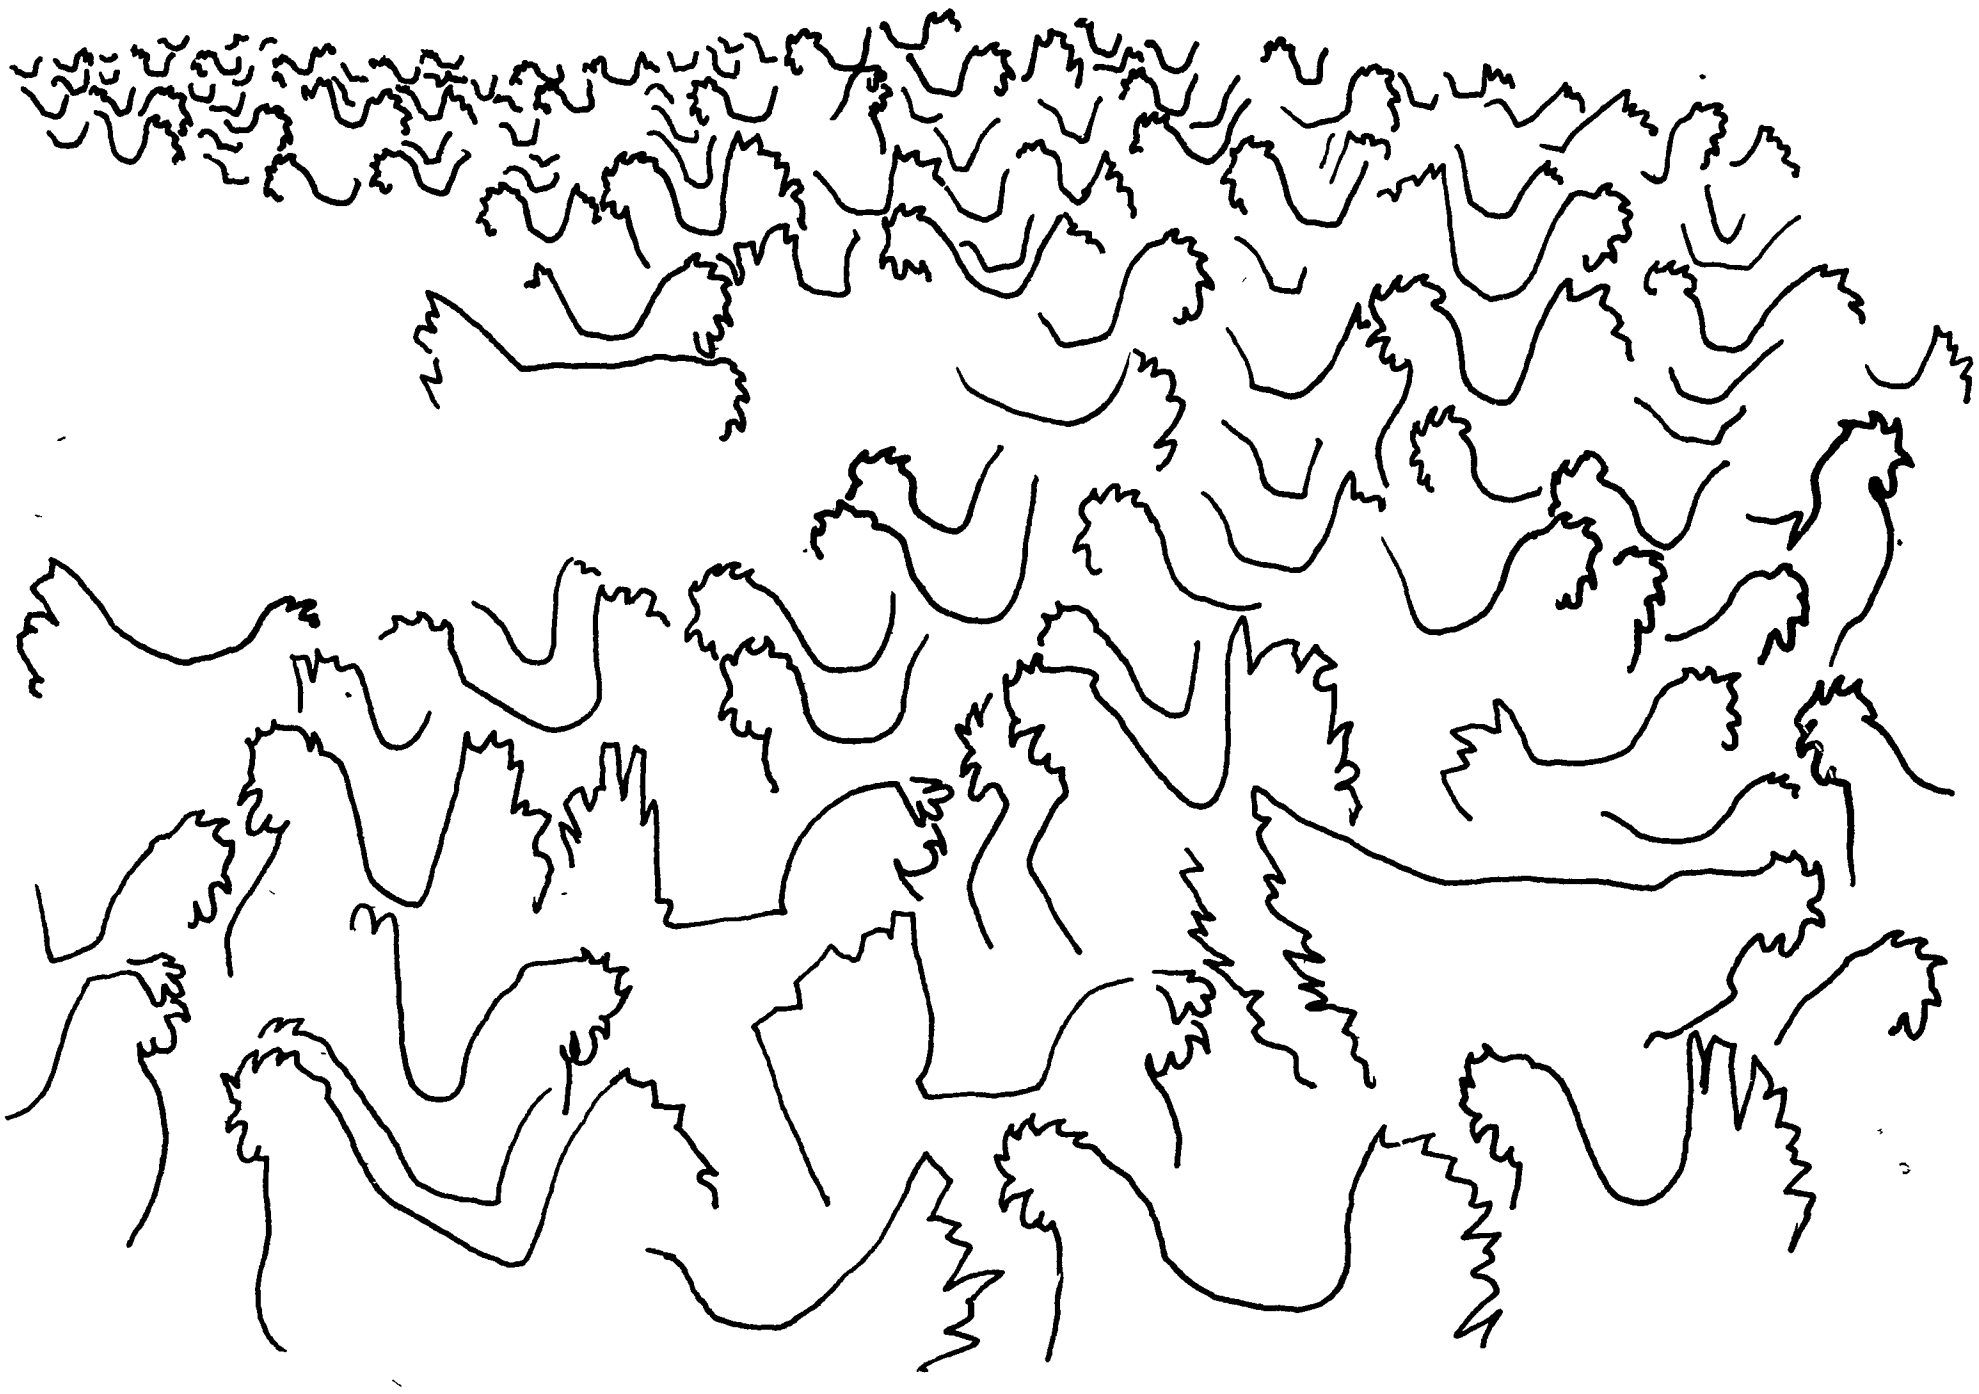
PHEW! TAX TIME'S OVER

Next Year Let Our Flock Records Help



Pennfield's computer records are accurate and complete enough to use for tax purposes. Make them your record keeper and keep your records straight.

Keeping good records is a vital part of a successful poultry operation. And Pennfield's Computer Flock Analysis is designed to do that for you.

With the help of the Pennfield computer, all the information you need to make intelligent decisions to run your poultry operation is compactly printed on one computer sheet.

The records are so clearly stated, you can use them to help you obtain credit from the bank.

At your invitation, a Pennfield area manager will answer all your questions about Computer Flock Analysis.

THE OLD FARMER'S ALMANAC

MARCH 24-30, 1975

March is neither winter nor spring.

Watch out for tornadoes now . . . Jim Thorpe died March 28, 1953 . . . Full moon March 27 . . . Skunk cabbage flowering now . . . Average length of days for the week, 12 hours, 29 minutes . . . Eiffel Tower opened March 30, 1889 . . . Ore shipping season on Great Lakes begins this week . . . Ponce de Leon discovered Florida, March 27, 1513 . . . The young are slaves to novelty, the old to custom.

Ask the Old Farmer: Two questions: 1) Why did our pioneers cover their bridges? 2) How did the expression "deaf as a haddock" originate? R. M., Phoenix.

Bridges were covered for the same reason that women wear petticoats — to protect the underpinning. "Deaf as an adder" comes out of the Scriptures. Haddock doesn't belong at all.

Home Hints: When your child has outgrown it, put the three-sectioned dish next to your sink to hold a bar of soap, a steel wool pad, and a nylon net pad.

OLD FARMER'S WEATHER FORECASTS

New England: Rain to start, then clear and seasonable; clouding up latter part with rain by weekend.

Greater New York-New Jersey: Most of week generally clear and cool; moderately heavy rain by weekend.

Middle Atlantic Coastal: Early week mostly sunny and warm; light rain by end of week.

Southeast Coastal-Piedmont: Fair and cold to start, then warmer with heavy rain; end of week clearing and colder.

Florida: Week begins clear and cold, then frost in north and central with rain elsewhere; rain continuing latter part but clearing and mild by weekend.

Upstate & Western N.Y.-Toronto & Montreal: Clear and cold at first, then gradual warming; rain changing to snow and colder at week's end.

Greater Ohio Valley: Early week clearing and warm, then rain in west and showers in east continuing to end of week.

Deep South: Fair to start, then rainy; end of week fair and warm in central and along Gulf, cold and cloudy in north.

Chicago & Southern Great Lakes: Clear and mild through midweek, then rainy; end of week partly cloudy with occasional light showers.

Northern Great Plain-Great Lakes: Cloudy and mild at first, then snow in west and rain in east; snow latter part in west with rain or freezing rain elsewhere.

Central Great Plains: Clear and warm to start, then rainy with some snow in northwest; end of week clear and cool.

Texas-Oklahoma: Early week partly cloudy and cool with scattered light showers; clear and warm latter part.

Rocky Mountain Region: First part of week clear and mild in north with snow in central and south; week ends pleasant in north with snow elsewhere.

Southwest Desert: Cloudy and mild in east, then light showers in west; light showers latter part in east and heavy rain by weekend in west.

Pacific Northwest: Scattered showers to start, then mostly sunny and mild to end of week.

California: Quite heavy rain at first, then letting up except in north; rainy again latter part.

Local Grain

Thursday, March 20

These prices are made up of the average prices quoted by a number of participating local feed and grain concerns. It should be noted, however, that not every dealer or broker handles each commodity. All prices are per bushel except ear corn which is per ton.

The average local grain priced quoted Thursday, March 20, 1975 are as follows:

	Bid+	Offered+
Ear Corn	59.50	66.00
Shelled Corn	2.87	3.10
Oats		
Local	1.55	1.83
Western	——	2.06
Barley	2.19	2.52
Wheat		
Millers	3.17	——
Feed	2.10	2.37

+Bid is the price the dealer will buy from the farmer delivered to the mill. Offered is the price the dealer will sell for at his mill

545 Attend Pa. Poultry Federation Fundraiser

When John Hoffman looked over the audience at the Pennsylvania Poultry Federation's annual banquet on Wednesday night, he saw 545 faces looking back at him, the largest number to ever attend one of these yearly fund-raising get-togethers. Hoffman, the federation's executive director, was master of ceremonies for the $50-a-plate affair which was held at the Harrisburg Host Motel.

Co-chairmen for the banquet this year were Kenneth Longacre, of Horace W. Longacre, Inc., Franconia, and Dale M. Weaver, Victor F. Weaver, Inc., New Holland.

The group heard from Pennsylvania Deputy Secretary of Agriculture Jane Alexander and from Dean Beattie, dean of the Penn State College of Agriculture. Beattie talked about the cutback in funds for the university's research programs in the coming year, and commented on some of the programs that would have to be curtailed.

Also speaking were Vernon Leininger of the Ko-Ka-Le-Ko Egg Ranch in Denver. Leininger is president of the federation for 1974-75. Pennsylvania Poultry Queen Kathy Bicksler brought the group up to date on her activities since she was crowned.

Entertainment was provided by vocalist Nancy Lee Howe and comedian Billy Kelly.

CHICKEN GRAVY

2 tablespoons fat drippings
2 cups milk
3 tablespoons corn starch
1/4 cup water
Salt, pepper to taste

Return the fat drippings to skillet in which chicken was fried. Stir in milk. Cook over medium heat stirring and scraping pan to loosen browned meat juices. Mix together corn starch and water. Stir into milk mixture. Cook, stirring constantly, until gravy comes to a boil. Season to taste with salt and pepper. For thinner gravy, stir in extra milk. Makes about 2 1/4 cups gravy.

QUALITY from top or bottom
Harvest haylage, silage, or high moisture ground corn

Preschooler Meeting Slated for April 3

"You and Your Preschooler" will be the subject of a meeting for Lancaster County parents to be held at St. Peter's Lutheran Church on April 3, 1975 from 6:45 to 10:00 p.m. and again on April 4, 1975 from 8:45 a.m. to 12:00 noon.

The session sponsored and conducted by the Lancaster County PennState Cooperative Extension Service, will include a general session on disciplining the preschooler, presented by James VanHorn, Family Living Specialist at The Pennsylvania State University. Participants will then select two of four workshops offered: how to develop creativity in the preschooler; how to select preschool educational programs; managing with a junior consumer; children and television.

Discussion sessions will include "learn by doing" activities for parents. In addition, education exhibits relating to preschoolers will be on display and handout materials will be available from local service agencies.

Anne Hinkle, Extension Home Economist, Lancaster County, says that the preschool years are the important ones in setting the stage for a child's future learning. She urges county parents of preschoolers to attend this program. For those parents wishing to bring their small children, a nursery and babysitting service will be provided at the meeting location for 30 children at the cost of $1.00 per child. Babysitting services must be confirmed by phone because of the limited space available.

To register for the program on "You and Your Preschooler", call or write the Lancaster County Penn State Cooperative Extension Office, Room 1, 1383 Arcadia Rd., Lancaster, 394-6851.

Farm Commentary

by Dick Wanner

Can a Corn Cut Back Work?

The movement to cut back corn production has been felt very little here, but farmers in the Midwest are apparently very interested. A meeting in Ames, Iowa, on Thursday brought close to 5000 farmers. Without a doubt, they represent a significant chunk of Iowa's and the nation's corn production.

There's been some noise in Pennsylvania about cutting back, but even so, a lot of farmers haven't heard much about it, and many of those who have wouldn't think of taking the planter out of the field until they've got every last kernel planted. Some Midwestern growers have pledged to plow down an acre a day for every day after June 1 that the corn price is below $2.90. It would take a pretty strong-willed farmer to do something like that, and Robert Lounsberry, Iowa's secretary of agriculture, told Lancaster Farming that he couldn't see very many people doing it.

Because Pennsylvania is a grain deficit state, many Keystone farmers could suffer from the effects of a cutback in corn production. Farmers who specialize in corn production could, of course, benefit by higher corn prices whether or not they went along with the cut back notion. One thing that seems to have been overlooked, though, is that a cut back won't guarantee a price high enough to offset the loss in production.

Lou Moore, Penn State's well-known extension ag economist, said that if domestic usage stayed the same, corn prices could jump 40 to 45 percent if production were cut back 10 percent But domestic usage could very well plummet with that kind of a price hike. Most of that corn, after all, goes into the bellies of hogs, cattle, chickens and dairy cows. And if corn today were 40 percent higher, farmers would be paying well over $4 a bushel.

Or would they?

Emergency Call For Hay

Vermont farmers are sorely in need of hay right now, and they're looking for sources in Pennsylvania They need good dairy quality hay, and if any of you farmers or dealers think you can help them out, contact Al Heald, 802-862-6501, extension 6386. Heald is with the Vermont State ASC Committee, 411 Main St., Room 396, Grassmount Building, Burlington, Vermont 05401

House Sends Farm Bill to Senate

The House passed an emergency farm bill on Thursday that could put extra income into farmers' pockets this year. Perhaps the best news for local farmers is the proviso that milk price supports be computed quarterly instead of annually as is now the case. Dairy groups had been lobbying also for a change in dairy parity to 85 percent from the present 80 percent, but the bill retains the old parity level.

The bill was passed on a 259 to 162 vote and went to the Senate. The Senate Agriculture Committee planned to start considering it on Friday.

The bill provides higher government supports for wheat, cotton and livestock feed grains in addition to more frequent computation of adjustments for dairy price supports.

Farm experts have estimated it will cost the government $470 million.

Figures on its cost to consumers have been disputed. The Agriculture Department estimated that a year from now milk will go up 6 cents a gallon, butter up 15 cents a pound and cheese up 7 cents a pound.

However, backers of the bill say that projected inflation over the course of the coming year will be responsible for price increases and not necessarily the impact of the bill alone.

The cost of the bill was estimated by farm law experts as $350 million for cotton, $50 million for milk and $70 million for grain. The measure affects government supports for these crops.

Cattle On Feed Hit 6-Year Low

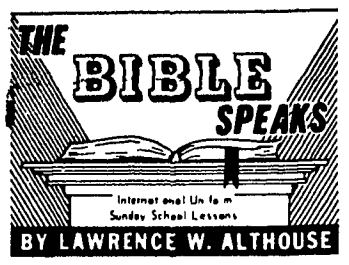
Cattle on feed on March 1 for slaughter market in 7 States (Ariz., Calif., Colo., Iowa, Kans., Nebr, Texas) at 5,463,000 head. That's down 41 pct. from a year ago and the lowest since Sept 1968 (way back when there were only 6 States in the monthly total Kansas was added in 1972).

Sharpest declines from a year ago were in California, Texas and Arizona. California's March 1 total, at 476,000 head, was down 55 pct.; Texas', at 1,076,000 head, was down 54 pct.; Arizona's total, at 304,000, was down 49 pct.

Potato Stocks Hit Record

U.S potato stocks held in fall production areas totaled a record 102 3 million cwt on March 1 That's up 26 pct above a year earlier, 4 pct. above the previous record March 1 holdings of 1972

Here's the breakdown. Stocks in the 8 Eastern States, at 21.6 million cwt., up 40 pct. from a year ago; those in the 8 Central States totaled 17.8 million cwt., up 28 pct. from a year ago. Stocks in the 8 Western States, at 62 8 million cwt., up 22 pct. from a year ago.



THE GREAT RACE

Lesson for March 23, 1975

Background Scripture: Hebrews 11 through 12.
Devotional Reading: Revelation 3:18-21.

Perspective can make all the difference.

For example, life can be viewed by one person as a "wild goose chase," while another views the same circumstances as "the great race."

It is the latter view which captures the imagination of the writer of the Epistle to the Hebrews. Climaxing a long passage on the meaning of faith, he challenges his readers: "... let us run .. the race that is set before us" (Hebrews 12:1).

This is a view that very much parallels that of a little boy who was leading his sister up a rocky hillside. "Why this isn't a path at all," complained the little girl, "It's all bumpy." "Of course," replied her brother, "the bumps are what you climb on!"

Lighten the load

If we are to regard life as "the great race," however, there are certain provisions that will help us from experiencing it as a "wild goose chase."

For one thing, a runner must travel light! "Let us also lay aside every weight and sin which clings so closely . . . " (12:1). A runner in a race will not be able to successfully complete the race in good time if he is burdened down with non-essentials. His uniform is lightweight and he carries nothing on his back or in his hands.

Unfortunately many of us try to run "the great race" with too many encumbrances. We are weighted down with things that cannot possibly help but slow us down. If we want to run the race successfully, then we must get rid of any and all encumbrances.

So it is, says the writer, with life itself. If we are burdened with the weight of our sins, we will be too preoccupied to meet lifes challenges with confidence. As the obese person must give up food, the alcoholic his drinks, the lung cancer candidate his cigarettes, so the disciple of Christ must divest himself on any encumbrance in running the "great race."

Keep going

Running the "great race" also requires perseverance says the writer of Hebrews. What this means, of course, is that in life as in races, we must not give up before we have reached the finish-line. Just as the tortoise defeated the speedier hare by his perseverance, so this is the same means by which we can prevail in this race. So many people lose the race because they do not persevere and give up somewhere along the way. The road of life is dotted with the evidences of those who did not "keep going!"

There is one other principle that is necessary to keep life in perspective: we must keep our eyes on the goal. The writer of Hebrews says: "looking to Jesus, the pioneer and perfector of our faith, who for the joy that was set before him endured the cross, despising the shame, and is seated at the right hand of the throne of God" (12:2). Jesus could endure the hardship along the way because he kept his eye focused on the goal. Because he did, he was richly rewarded at the completion of his race.

So let us run unencumbered, persevering in the tough places, and keeping our eyes on the goal in this Great Race that is set before us!

NOW IS THE TIME...

Max Smith
County Agr. Agent
Telephone 394-6851

To Meet Lime Needs

One of the best ways to get maximum results from fertilizers is to have the soil at the proper degree of acidity. In most cases this is from a pH of 6.5 to 7.0 (potatoes will be lower on the scale). If the soil needs more lime and it is not applied, then the fertilizer elements will not be as available to the plants. As was stated last year, one of the best ways to make fertilizer dollars go further is to meet the lime requirement before the fertilizer is applied. This is true for commercial farms as well as home lawn and gardens. An investment in lime helps to get greater returns from the fertilizer.

To Place Fertilizer Carefully

Many folks are anxious to grow maximum amounts of crops and vegetables from their small plots and as a result, are quite liberal in the use of commercial fertilizer. A word of caution is needed to prevent the fertilizer from burning the seeds or plant roots. Any fertilizer containing nitrogen or potash can do damage to seeds or roots. This means that the fertilizer should be applied and worked into the ground ahead of planting, or placed to the side and deeper than the seeds or roots. When they both go into the ground together, and in contact, the seeds may not germinate or will be stunted. Fertilizer placement is important in order to get strong plants and top yields.

To Graze Animals Gradually

Forage growth is starting in many fields and pastures. Winter rye is making rapid growth and some livestock producers may be grazing their animals in the next few weeks. Since this new growth is very lush, it could cause scouring or bloating if the animals are not accustomed to the grass. We suggest that animals first be given a feeding of dry matter such as hay and silage before going to the spring pasture; also, it is best to permit them on the new pasture for short periods (20 to 30 minutes) for the first several days. The continued feeding of dry matter after the animals are used to the new growth is suggested for best results.

To Keep Weed Killer Sprays Out of Gardens

Many gardeners are of the opinion that chemical weed killers may be sprayed or worked into their garden soil to prevent weed growth this summer. This is a dangerous practice in the hands of the inexperienced grower and we would suggest that weed killers not be used in the home garden. Some plants may not be harmed by the common weed killers while others nearby can be killed by this same chemical. With the large number of different kinds of vegetables growing in such a small area, it is not practical to consider trying to stop weed growth with chemicals. In many cases they will do more harm than good. We suggest clean hand or mechanical cultivation for the home gardener for best results.

Farm Calendar

Saturday, March 22

Pa. Landrace Swine Sale, Farm Show Arena, Harrisburg.

6:30 p.m. - Lancaster County Swine Assoc. annual banquet, Blue Ball Fire Hall.

6:45 p.m. - Twin Valley Young-Adult Farmer annual banquet, Twin Valley H.S.

Carol and John Munson (left) Fontana, visit the Penn State exhibit at the Philadelphia Flower Show. James Rathmell, Extension Horticulture Specialist, and Newton Bair (right) Associate Lebanon County Agent, provide answers to lawn and garden questions.

John Munson is the Area Resource Development Agent for the Capital Region of Central Pennsylvania.

Plants Solving Pollution

Planting trees can be beneficial in combating pollution, particularly air and noise pollution. This was the theme of the Penn State exhibit at the Philadelphia Flower Show which ended Sunday evening, March 16th. The exhibit demonstrated how certain varieties of trees tend to absorb large quantities of air pollutants. Of course, plants can't provide the final solution to air pollution because they do suffer negative effects from the chemicals they take in.

Proper planting of trees and shrubs can also effectively reduce noise pollution from highways, factories, or other noise sources. Evergreens are particularly valuable in reducing noise since they hold their leaves all year. Deciduous plants loose much of their noise abatement ability during dormant months.

What about simple visual pollution? Vertical gardens can be constructed to block unsightly sight of garbage cans and back alleys. Still rarely seen in the United States, the idea for a vertical garden was brought from Europe several years ago by Penn State Horticultural Specialist Jim Rathmell. Easily constructed from a metal frame, heavy wire mesh lined with polyethelene, and lots of rich soil, vertical gardens of almost any size can grow many varieties of flowers and vegetables. And they are ideal for small yards where space is at a premium.

The Penn State exhibit was manned by Cooperative Extension agents from the counties of Southeastern Pennsylvania, who fielded general lawn and garden questions as well as questions about plants and pollution control on Saturday.

Money Management

Printed as a public service by the Lancaster Farming and the Pennsylvania Institute of Certified Public Accountants.

Are insurance benefits taxable? If they are on property losses, only if the proceeds exceed the amount of loss. If they are life insurance benefits, no. If on health and accident insurance, generally only if they are for medical costs you took as a deduction in a previous year.

IFYE

|Continued from Page 1|

interviews and physicals, was notified of her acceptance in February.

From now until her actual departure in June, Fay will be attending orientation sessions and briefing meetings. Last weekend, amid a late winter snow storm, Fay traveled to Penn State where she joined with other IFYE candidates from Pennsylvania in a briefing session.

During the meeting, the youths were given insight into the life they might expect by former IFYE representatives along with learning about the economics and food problem situations in this country and abroad.

Fay will also be traveling to Washington before she leaves to attend another orientation session which is planned to help the IFYE learn about the country to which they will be traveling.

The International Farm Youth Exchange program itself began in 1948 and is one of 4-H's International programs. Selected youths such as Fay live and work with rural families in other countries for six months, learning about their way of life and working with youth programs similar to 4-H.

The program is financed both by the sponsoring county and also by the National 4-H Foundation. Funds are often donated by local groups as well as industry.

While in Germany, Fay will be living with six to seven different families and will be moving about every three weeks. While she doesn't know just what she'll be asked to do, work on the farms will no doubt be in store.

"Other IFYE's have told me that when you go to Germany you do a lot of farm work, even the women are asked to help," Fay commented.

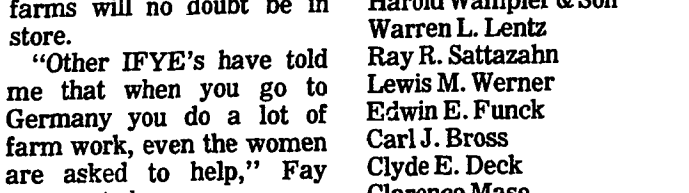
Although the farm methods might be a little different in Germany, Fay is no stranger to farm life, having grown up on a beef and poultry farm on Eden Road in Lancaster County with her parents Mr. and Mrs. Raymond Stoner.

"I guess I'll have to learn all the farm terminology as I don't even know how to say farm in German - but I guess that will all be a part of learning," Fay explained.

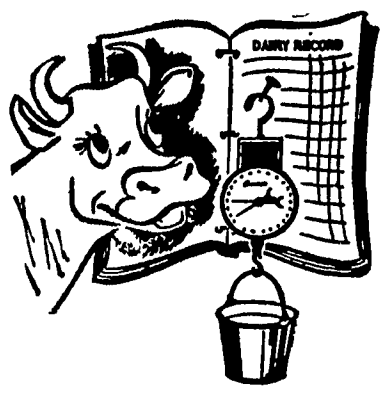
Fay will be in Germany until December of 1975 and upon her return she hopes to finish her college major.

"Following my graduation, I'd like to go on to graduate school and study experimental psychology, but that is all in the future for now."

Although her future plans aren't definite, Fay has plenty to keep her present schedule full. In fact Fay left for Toronto this weekend to participate in the Junior Farmers of Ontario's meeting representing Pennsylvania as an outstanding farm youth from the United States.



Some people believe that if you can be tickled and not laugh, you'll get into heaven.



LEBANON COUNTY DHIA MONTHLY REPORT

FEBRUARY, 1975

A cow in the herd of Marvin K. Meyer produced the highest lactation record for the month of February. Blossom produced 887 pounds of butterfat with 22,794 pounds of milk.

Second high producing cow came from the herd of Ernest Wagner. Number 128 produced 822 pounds of fat with 20,475 pounds of milk.

In the herd summary it was the herd of Isaac E. Zimmerman which placed high with 2.34 pounds of fat per cow daily. Second high was the herd of Dale Hostetter and Sons which recorded at 2.31 pounds of fat.

Dee-licious!
Purina Golden Bulky

Cows and growing heifers love the sweet flavor and aroma of Purina Golden Bulky.

It's sweet because it's high in molasses. It's light and bulky — 100 pounds fills six bushel baskets. It's a high protein ration fortified with Vitamins A and D.

Golden Bulky is versatile, too. It can be used to balance the grain in your milking ration, dry cow ration or heifer ration. You can use Golden Bulky to supplement dry late summer and fall pastures or to preserve silage. And it can be top-fed or mixed with your own grain.

Next time you stop by, let us show you how many ways you can feed versatile and nutritious Purina Golden Bulky.

Grape Plan

[Continued From Page 1]

promotion group in Minnesota. The funds that stayed in the state were used largely for the expenses of the Cherry Princess promotion. Reiter said that the administrative costs collected by the state for handling the program amounted to about five percent of the total.

After the meeting, H. Peterman Wood, president of the Southeast Grape Industry Association, expressed an interest in the marketing program, but said that there were some major questions that needed to be answered first. The biggest of those, he felt, was whether or not the group would be able to use the money to promote Pennsylvania wines, an alcoholic beverage. Wood operates the Pequea Valley vineyard and winery in Souther Lancaster County.

The growers at the meeting represented a significant portion of the infant wine grape industry in southeast Pennsylvania. Some growers were also present from Maryland.

There are about 1300 acres of wine grapes in the Commonwealth. Of these, about 1000 acres are in Erie County, and the rest are scattered throughout the southeastern area. Lancaster County has approximately 100 acres of vineyards planted to wine grapes. The great majority of this acreage has been planted only in the past few years, and many of the vines have yet to bear fruit. Grape vines don't ordinarily bear until the third year.

The growers came to Thursday's meeting to learn more about the care of their vines. They heard from Associate Lancaster County Agent Arnold Lueck who discussed weed control and the licensing of pesticide applicators.

Dr Carl Haesler, a Penn State extension polomogist who heads up the North East Research laboratory in Erie County, talked about fertilization, pest control, and trellis management. Haesler also gave pruning demonstrations in the vineyards of Robert Hummer, Manheim, and Raymond Stoner, Lancaster.

Dr. Don Petersen, a Penn State extension plant pathologist, discussed the control of black rot, botrytis and other dieases of the grape plant.

Holsteins Auctioned Exclusive Sale

An Exclusive Sale o Holstein Cattle was held o Thursday, March 20, at th Guernsey Barn Pavilion o Rt. 30. R. Austin Backus Inc. of Mexico, New York served as sale managers an auctioneers with Earl Grof of Strasburg as the loca representative.

The Exclusive grou represented cattle hand picked from all over the United States. The averag for these animals was $748 with the top bull, an Ivanho son selling for $61,000. Th top' open heifer sold fo $30,000 with the top cow, a first calf heifer selling for $20,000.

In a spring consignmen sale which followed, 7 animals were offered for sale with the top cow selling for $3500. Buyers from 12 different states and Canada attended the sale.

We're just part of the team.

Sure, we run short on supply sometimes, just like everyone has been. But we've got a lot more going in the long run than just selling "product."

We offer the "Complete Approach" . . a program backed by the entire Ortho Marketing and Agronomy Team

What does this mean to you, the customer? Help on soil sampling. Sound fertilizer recommendations that get the best use out of the supply available Equipment and personnel for timely custom application. And detailed record-keeping services on your field locations, nutrient levels, and management history.

Come the harvest, you get the best reward of all a top-quality, high-yield harvest.

Talk to us . . we're part of a team you can rely on.

The Ortho team approach helps you produce.

Lawn Disease Spreads

Lawns damaged last year with a disease known as Helminthosporium leafspot and crown rot could get worse if treated early this spring with high levels of nitrogen fertilizer, cautions Dr. Herbert Cole of The Pennsylvania State University. As professor of plant pathology, he suggests waiting until late May or early June to apply lawn fertilizer.

Dr. Cole says Herminthosporium fungi thrive on cold, wet weather and over-succulent soft grass often resulting from the over-use of nitrogen fertilizers in early spring. Known as "melting out," these leafspots and crown rots are probably the most common and severe disease of home lawns, he adds.

Spring symptoms of the disease show up as an abundance of spots on individual grass blades, often giviing the lawn a brown or reddish cast. This normally occurs from late April to early May. Death of leaves and thinning of the lawn takes place. By late May or early June the disease has spread to crowns and roots and the grass literally melts away - giving the disease the title "melting out."

Not too many lawns need high levels of early spring nitrogen - disease or no disease, Dr. Cole claims. Applying an overally fertilizer program in early to mid June will provide nutrients for summer growth when many lawns really need it, he adds. Using excessive nitrogen in the spring just results in rapid growth withthe need to mow twice a week or more, especially in wet weather. This accumulates clippings and organic matter that aren't needed - thus creating more problems than benefits.

Dr. Cole observes that Helminthosporium fungal organisms become active in the spring. Spores are released and are splashed by rain and water to newly-emerging grass leaves where leaf spots develop. Later the spores are washed to crown and root areas where crown rot and root rot develop. He indicates many homeowners were bothered with the disease last year.

Successive leaf infections reduce the foliage until only a single leaf or no leaves remain. At this stage the lawn is very susceptible to damage from people walking on it, children playing, or other uses. Loss of foliage can also result in invasions by weeds.

Helminthosporium fungi attack nearly every grass species found in the home lawn, Dr. Cole notes. Certain varieties of bluegrasses and fescues are quite susceptible. The bent and ryegrasses have their Helminthosporium disease. On golf courses, some bentgrass Helminthosporium diseases are mid or even late summer problems.

With most bluegrass lawns, reduced early spring fertilization may not only save grass but also money at current fertilizer prices.

Sewing Course Series

Increased family clothing costs have created an interest among women and girls - and men and boys - in learning how to create clothes for themselves and their families.

To help you learn to sew, BEGINNING TO SEW - a series of 13, half-hour color programs, will teach you basic clothing construction skills at home. "Beginning to Sew" was produced by the Cooperative Extension Service of The Pennsylvania State University and WPSX-TV, the University's educational television station.

"Beginning to Sew" will be broadcast each week on WITF, Channel 33, Monday, 7:00 p.m. beginning March 31.

Ruth Ann Wilson, Extension clothing and textiles specialist, will show you the "how-to's" as they apply to children's clothing. She will help you create garments that have individuality and will be fun to wear as well as save you money.

Some of the topics covered in the series are tools for the job, know your sewing machine, fabric facts, patterns for children, facings and fasteners, pants, tops, raglan sleeves, knit jackets, set-in sleeves and collars, buttonholes, buttons and hems.

To find out how you can enroll, free of charge, in the "Beginning to Sew" series and receive your viewer's guide, contact the York County Extension Office, Court House, York, Pa. 17401 or phone 848-2101.

Solanco 4-H Club

A reorganizational meeting of the Solanco 4-H Community Club will be held on April 11 at the Mechanic Grove Church of the Brethren beginning at 7:30 p.m.

Leaders for the club will be Ruth Akers - sewing; Dottie Richardson - cooking; Betsy Witman - knitting; Dennis and Charles Allen - photography and gardening; Clyde Aument - capons and Mike Huss - swine. Advisors for the Club are Everett Kreider, Jason Weaver and Gordon Herr For further information on joining call: 786-2731 or 786-2531

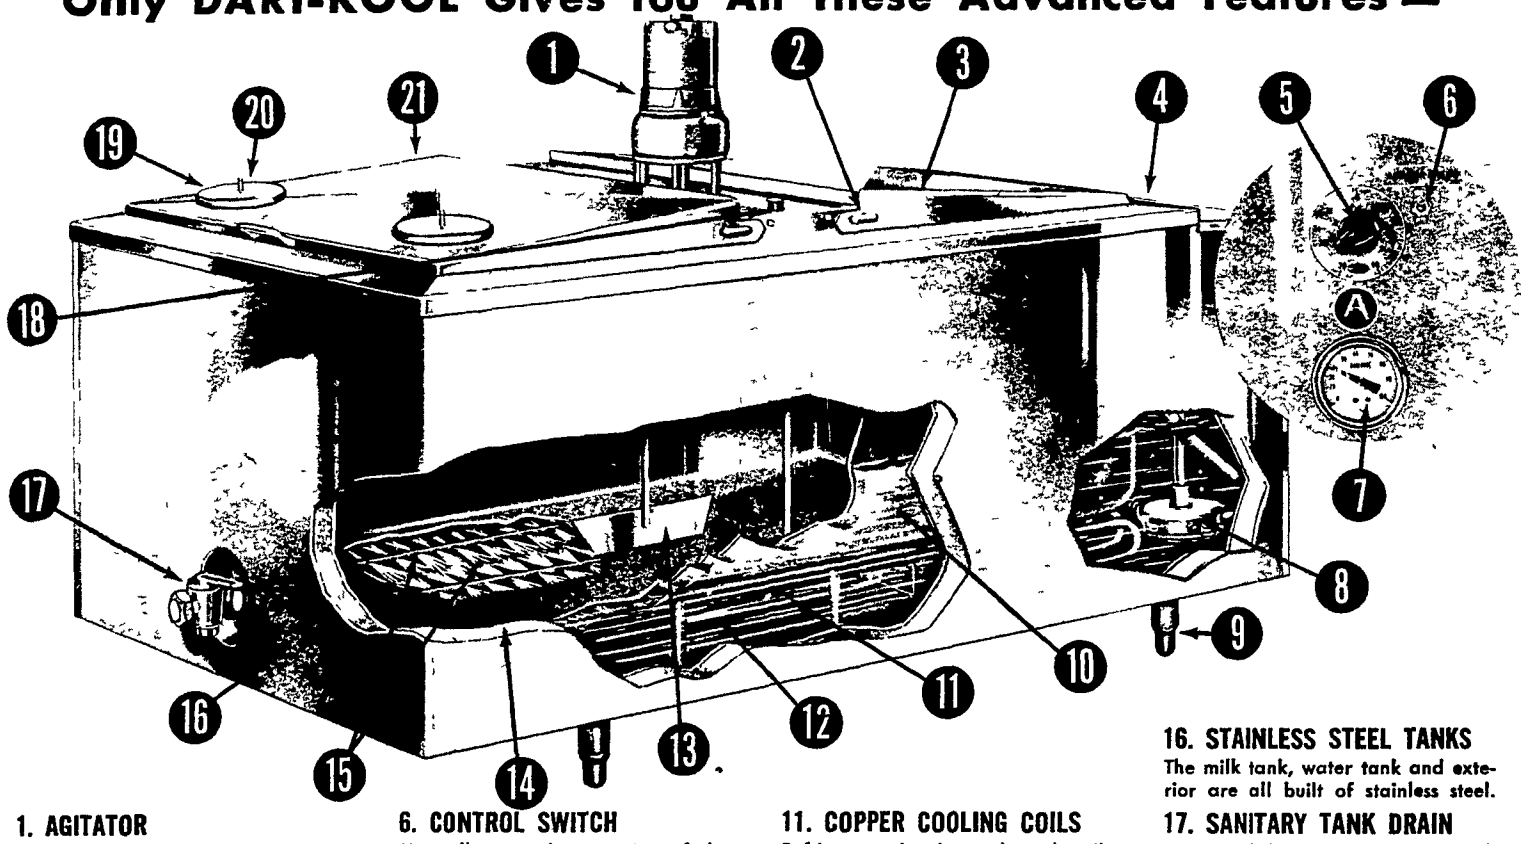
ICE-BANK MILK COOLER SPECIFICATIONS

DARI-KOOL Dou-Matic MILKERS

Only DARI-KOOL Gives You All These Advanced Features —



1. AGITATOR
Choice of 1 or 2-speed agitation 2-speed optional at additional cost

2. REINFORCED COVER HOOKS
Provide firm, sure support for cover when raised Welded on for strength

3. TANK COVERS
The tank covers are easily removed for washing or tank inspection

4. CONTROL CABINET
All controls for operating tank are easily accessible for servicing

5. TIMER
Controls operation of cooler

6. CONTROL SWITCH
Manually controls operation of the water pump and agitator

7. THERMOMETER
Positioned for easy reading Accurately indicates milk temperature

8. BRASS WATER PUMP
High capacity pump circulates water for fast milk cooling

9. ADJUSTABLE LEGS
After tank has been levelled in milkhouse the legs may be sealed

10. 33° ICE-WATER
Rapidly circulating ice-water removes milk heat for fast cooling

11. COPPER COOLING COILS
Refrigerant circulates through coils around which ice-bank is built

12. LARGE RESERVE ICE-BANK
Provides the ice-water necessary for rapid cooling of the milk

13. AGITATOR BLADE
Designed for complete, gentle agitation of the milk in all parts of the tank

14. INSULATION
The most efficient insulation protects the milk Reduces operating costs

15. ICE-WATER SPRAY PIPES
Ice-water is pressure-sprayed over milk tank surface for fast cooling

16. STAINLESS STEEL TANKS
The milk tank, water tank and exterior are all built of stainless steel.

17. SANITARY TANK DRAIN
Designed for fast complete tank draining Sanitary Easy to clean.

18. CALIBRATED MEASURING ROD
Weight of milk is accurately measured Easy to read. Stainless steel

19. TIGHT FITTING LIDS
Do not fall off when cover is raised. Lids fit tight to keep out vermin

20. JUST-RIGHT POUR HEIGHT
Most models low for easy pouring, cleaning and inspection

21. REMOVABLE COVERS
Covers easily removed for washing, cleaning and inspection.

Tank prices are up, however we have in stock new 400 gal. - 500 gal. - 650 gal. milk tanks at the old price.

Winter Pears Abundant

The most misunderstood winter fruit is the pear. The problem lies not in the eating, but in the ripening.

Winter pears, more specifically the Anjou variety, are on the market in record quantities. Marketing Specialists of the U. S. Department of Agriculture say the total pack of winter pears reached 6.9 million boxes. As of the first of the year there were 4 million boxes still available, 35 percent more than on the same date a year earlier.

A supply so large will insure good, fresh-fruit eating right into spring. But you must know when the pears you buy are right for eating.

Contrary to most ripening fruits, color is no indication of ripeness. Characteristic of the Anjou is its green to yellow-green skin and its smooth texture. This will not change during the ripening process.

Unlike most fruits, the pear is picked when mature but not ripe. As a matter of interest, should you ever see it advertised as tree-ripened, you would be right not to purchase it. Tree ripening of this pear causes it to lose its fine flavor and smooth texture.

The only true test of ripeness is the thumb test. It will be hard and firm to the touch when you buy it since it has been kept refrigerated since harvest. To ripen to perfect eating condition, pears should be held at room temperature, preferably 60 to 70 degrees, for a few days to a week.

Test pears daily. They are ripe when they yield to gentle thumb pressure. To test, place the pear in the palm of your hand and apply thumb pressur at the stem end of the pear. To inhibit further ripening, pears should be stored in the refrigerator.

Some fruit dealers now offer pears "conditioned" for immediate use. Conditioning, a commercial ripening process or fresh pears is a time-saving service for some food stores, restaurants, hotels, hospitals, and other institutions. But for the most part, pears found in food stores must be ripened by the consumer.

Anjou pears are great for out-of-hand eating and they are particularly good when used in salads. You'll be glad you served them in this manner. So will your family.

Pear Crunch Salad

6 fresh Anjou pears
2 tbsp. lemon juice
1 cup chopped celery
½ cup chopped walnuts
¼ cup chopped ripe olives
½ cup mayonnaise
Crisp salad greens

Core pears and trim tops to give petal shape. Sprinkle teaspoon of lemon juice over each pear. Combine celery, nuts, olives, and mayonnaise. Fill pears with crunchy celery mixture. Serve on salad greens.

Bank Notices

The Board of Directors of Dauphin Deposit Trust Company, at its regular meeting held on March 17, 1975, declared an 8 percent stock devidend, to be distributed on April 18, 1975 to stockholders of record on March 15, 1975.

According to W. D. Lewis, president of Dauphin Deposit, it had been the intention of the bank to distribute a 5 percent stock dividend upon the date that Dauphin Deposit's proposed holding company became operational. Formation of the holding company has been delayed due to requirements for additional information requested by the regulatory authorities. The Board of Directors, therefore, having in mind the best interests of the bank, its customers and stockholders feels justified in increasing the stock dividend to 8 percent and distributing it now.

Dauphin Deposit has sufficient authorized shares of stock to permit distribution of the stock dividend without the necessity for a special stockholders meeting, according to Lewis.

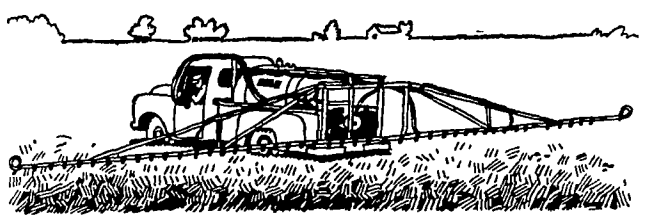
Arcadian Liquid.

Now's the time to top-dress grass.



Unlock the profits hidden in your pastures and meadows. Top-dress grass with Arcadian Golden URAN® liquid nitrogen. Properly fertilized, grass can produce yields packed with protein and equal in feeding value to a big corn crop For best results, fertilize several times a year Start with an Arcadian SLF mixed liquid fertilizer. Then follow with Golden URAN top-dressing after each cutting or grazing. Use SLF mixed fertilizers for top-dressing mixed grass and legumes and alfalfa stubble after a crop has been removed Add weed killers such as 2,4-D and trace elements if needed, to do more jobs at one time. Arcadian liquid spreads quickly, gives uniform coverage, and is economical to use We'll spread it for you, or you can do it yourself. Start now to make your most neglected crop your most profitable one

Producers Honored At Pennfield Dairy Day

Pennfield Corporation held its Fourth Annual Dairy Awards Luncheon on Tuesday March 18th at Good 'N Plenty Restaurant in Lancaster. Over 60 awards were presented to dairy farmers for outstanding 1974 herds and-or individual cow records. Winners came from throughout Pennsylvania and Maryland.

Special guests included Herman Stebbins, manager of Sinking Springs Farm, York, who outlined the basic fundamentals of a fine dairy herd; and Dianne Crider, Lancaster County Dairy Princess. Robert E. Gregory, Pennfield dairy and livestock marketing manager served as master of ceremonies.

Trophies, plaques and plates were presented to winners in three categories by Frank Campbell, Richard Poole and Stephen Leiser, Pennfield area managers. The 1974 categories and winners are:

Herds with over 17,000 pounds milk and-or 600 pounds butterfat - Sinking Springs Farm, York, 66 cows; Maple Lawn Farms, Inc., Fulton, Maryland, 143 cows; Suntrail Farm, Pitman, 40 cows; Elmer E. Kauffman, Christiana, 30 cows; G. Hershey Hostetter, Gap, 27 cows; Dale E. Hostetter, Annville, 72 cows; J. Elmer Lapp, Coatesville, 32 cows; Paul W. Chronister, Boiling Springs, 34 cows; Bo-Ann Farms, Gordonville, 34 cows; Eli K. Lapp, Gordonville, 33 cows; Pep-L-Lea Holsteins, Oxford, 74 cows; Cocalico Farm, Ephrata, 34 cows; Penns Peaceful Meadows Farm, Mt. Joy, 52 cows; Leader Farms, New Freedom, 76 cows; Wallymae Farms, Harrisonville, 56 cows; Stoltzcliff Farms, Atglen, 57 cows; White Lea Farms, Gap, 50 cows; Amos & Eleanor Hershey, Kinzers, 29 cows; Kingstead Farms, Damascus, Maryland, 146 cows.

Herds with an increase of 1,000 pounds milk and-or 40 pounds butterfat per cow average - Donald Bare, Lancaster, 38 cows; Bodendale Farm, Lancaster, 33 cows; Apple Brook Farms, Oxford, 66 cows; Eli S. Ebersole, Strasburg, 35 cows; Center Spring Farms,

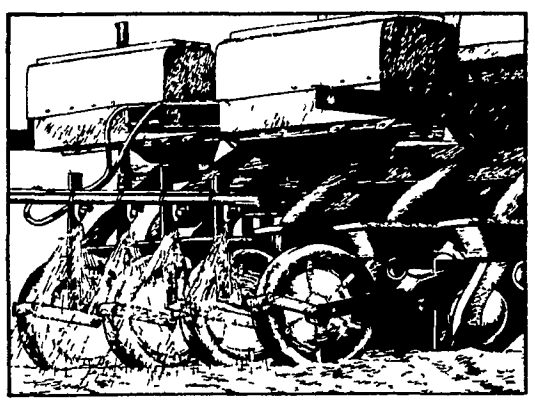
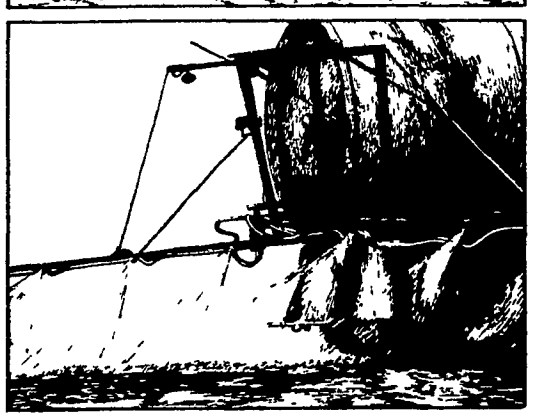
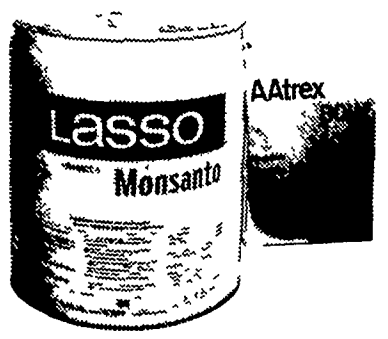
Apply your herbicide at the ideal time in corn:





Lasso Plus atrazine.



Apply Lasso plus atrazine tank mix as you plant, or after planting, before corn or weeds come up with or without liquid fertilizers.

Either way, you can plant as soon as your seedbed's ready—and still get the early grass and broadleaf control you need.

What's more, your herbicide goes on when the seedbed's in ideal condition for herbicide application.

Gossett Explains Beef Grade Changes

USDA beef grade changes announced March 6 should benefit both the cowman and the consumer by providing improvement in the financial stability of an ailing beef industry and by providing quality, leaner, low fat beef for the nation's consumer, says the executive officer of a leading beef breed association.

Dr. J. W. Gossett, executive vice president of American - International Charolais Association of Houston, said the changes would encourage maximum production of quality lean beef at reduced cost while "providing the quality of beef homemakers in most areas prefer, that is, beef of satisfactory taste and flavor without excessive fat."

Announced Thursday, March 6 by the USDA, the grade changes go into effect April 14 and follow recommendations of most segments of the beef industry. Foremost in the changes is the emphasis which the new system places upon cutability of carcass beef.

Cutability is an expression of leanness of beef and is measured by five different yield grades. Carcasses having a smaller amount of exterior fat have a higher "yield" of boneless trimmed cuts from the primary parts of the carcass, making them of more value—economically and nutritionally--to the industry.

"The cutability factor without question favors cattle that grow faster and thereby make that growth on less feed. These cattle are at the feed trough fewer days. They do not need an expensive layer of outside tallow to reach the quality of flavor and tenderness required by the consumer," Dr. Gossett explained. "It requires two and a half times as much feed or energy to produce a pound of fat as it does a pound of lean. Thus, energy requirements are less for the leaner kind."

As a result, Gossett forecasts an increased demand for the Charolais-kind of feeder cattle and that these faster-growing cattle will be placed in a more competitive position in the market. Charolais cattle have a higher lean to fat ratio and naturally will have a better yield grade than the remainder of the cattle population.

"These kind of cattle have proved themselves to be the more efficient kind of beef," he continued. "Research and industry leaders alike have shown that the faster growing, leaner kind of cattle are the most profitable. With increased emphasis upon yield of lean beef by the grading system, there will be more incentive for the feedlot operator to finish this kind of beef and the producer to make that kind of feeder cattle available to feedlots."

Gossett also pointed to a new reputation for the present "good" grade of beef as a result of the changes. The narrowing of the current "good" grade by removing the lower one-third of the grade will emphasize the quality of this kind of beef,

NEW FORD MOLD BOARD PLOW

Fast, simple, durable. New 3 to 5-bottom mounted models and 4 to 8-bottom semi-mounted. A choice of 14, 16 or 18-in. bottoms. Optional high pivot beams with automatic reset minimize stone damage, save you time in the field. High-speed bottoms plow at 6 mph. New Heavy-duty 2-way plows with 2, 3 and 4-bottoms also.

Solanco FFA Receives Honors

The Solanco FFA Parliamentary Procedure Team traveled to New Holland on Wednesday, March 12, to compete in the Lancaster County FFA Parliamentary Procedure Contest. Tom Jackson, President; and presiding Chairman, Gordon Herr; and Bruce Kreider, led their team to a stunning victory. Other members of the team were: Tim Smeltz, Vice-President; Ken Tucker, Treasurer; Lee Landis, secretary; Merle Ressler, Reporter; and Dewey Atkins, chaplain.

On April 14, the team will compete in the Area Contest, at Brownstown Vo-tech.

Also traveling to New Holland Wednesday, were Jeff Rutt and Randy Ranck from Solanco. They were competing in the Lancaster County FFA Senior Public Speaking Contest. Jeff placed second with a speech titled "Production at a Profit." Randy placed fifth with "World Hunger". Out of the ten contestants which participated in the contest, the top three speakers will advance to the Area Public Speaking Contest, on April 14 at Brownstown.

Jeff Rutt
Chapter Reporter

Order 4 Milk Price Up 4c

The February uniform price for federal Order 4 base milk increased 4 cents from the previous month. Excess milk showed an increase of 4 cents also, according to Andrew Marvin, Ephrata, fieldman for Inter-State Milk Producers Cooperative.

In comparison to Feb. levels one year ago, base milk was down 72 cents and excess down 10 cents. The base milk price was $8.98, the excess price was $6.90, and the butterfat differential was 7.8 cents for February.

The weighted average price for the market was reduced by 77 cents compared to Feb., 1974.

A total of 366 million pounds of producer milk was pooled in Feb. of which 63.06 percent was sold as Class I, showing a decrease of 1.65 percent of deliveries made in Jan., and a 0.16 percent decrease under Feb. a year ago. 7561 Order 4 producers provided 13 million pounds per day to dealers during Feb., averaging 1731 pounds per farm per day. Total value of producer milk was set at $31,470,011.47 for the month.

Penn Manor 4-H Club

The Penn Manor Community 4-H Club will hold a reorganizational meeting on Tuesday, March 25 at 8:00 p.m. in the Ann Letort School. Youths from 8-19 are invited to join. There will be six educational meetings throughout the summer and fall. For more information contact one of the local leaders: Mrs. John Thomas at 872-5646 or Mr. and Mrs. Clayton Charles at 872-7389.

PennAg Spokesman Says Rail Plan Hurts Farmers

The United States Railway Association was asked to reevaluate the impact of its preliminary system plan to restructure ailing Northeast railroads. D. Jay Wolgemuth, Mt. Joy, made the request on Monday when he appeared before an Interstate Commerce Commission in Harrisburg. Wolgemuth is a member of PennAg Industries Assoc., a group of Pennsylvania agribusinessmen, and is chairman of their transportation committee.

Referring to light density rail lines in the state, Wolgemuth said, "It appears to us that the more the needs of agriculture are considered by the planners, the more apparent the reasons become for continuing service to remote areas."

Wolgemuth pointed out that last year, the U.S. Department of Transportation proposed a plan which would have eliminated rail service to 163 Commonwealth agribusiness firms. The current study would affect only an estimated 56 firms across the state.

These 56 firms responded to a recent PennAg survey of their rail service needs. Some who provided tonnage data said they would increase rail utilization by 54 percent if adequate and consistent service were provided. USRA was urged to check with the firms before reaching their final decision.

Eliminating rail service to these Pennsylvania agribusiness firms and the farmers and communities they serve would mean an economic loss of some $11.2 million annually, Wolgemuth said. His figures were an extension of a study made by Dr. Thomas R. Kershner of Union College, Bradford County. Five mills in that county were forced to convert to truck transportation for incoming ingredients after tropical storm Agnes wiped out their railroad in 1973. Kershner's study showed that feed costs in the area have risen. The report also indicated that dairy production was adversely affected because some feedgrains became too expensive to use.

"American agriculture and its marketing system are composed of vast and intricate subtleties which relate one to the other and no one really knows for sure what the effect of lost rail service will mean," Wolgemuth said.

The PennAg spokesman also challenged the USRA's method for branch line profitability. He used as an example the Reading to Columbia branch, a total of 39.65 miles which the USRA chose to break into four segments. in determining costs USRA used the daily cost of a five man crew on each segment rather than dividing by four.

"Discrepancies of this sort tend to discredit other USRA figures," Wolgemuth stated.

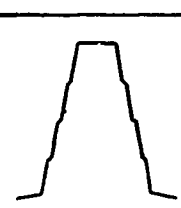
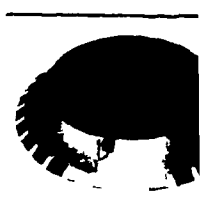
OPTIONAL GROUND CONTROL ROOF HATCH
Easily operated from ground level for proper release of air during drying and conditioning phases.



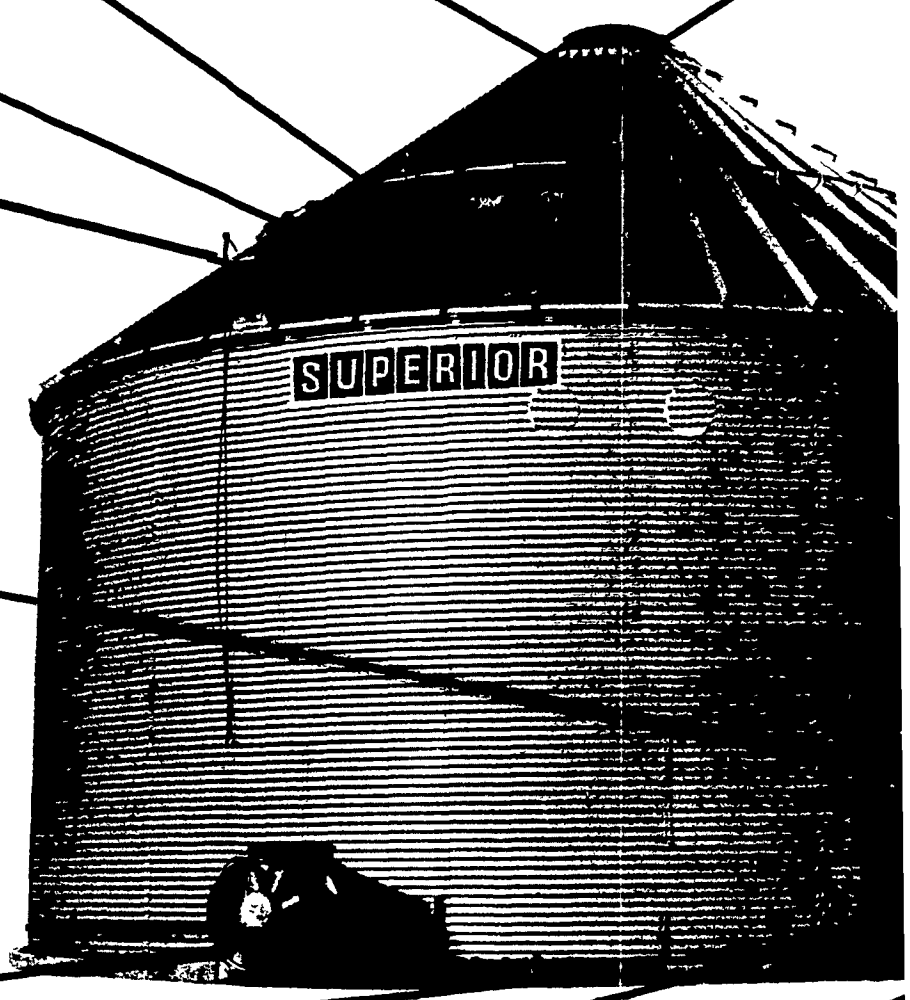
NEW HIGHER ROOF RIB
16 supporting angles on 3" ribs plus 35° pitch increases roof strength without costly trussing.

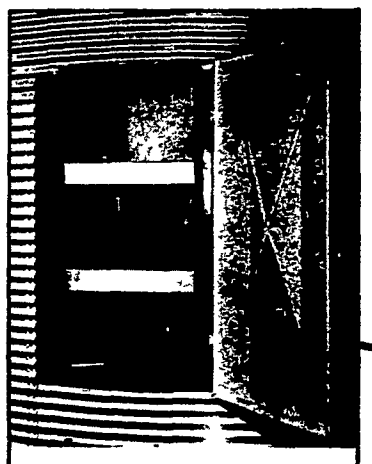
FULL CIRCLE SAFETY RING
Standard on 24' diameter and larger, it is laced through each roof rib to provide a safe, rigid foothold and add strength to roof.

OPTIONAL AUTOMATIC AIR VENT
Louvers open and close automatically providing air outlet when pressure requires and moisture protection when fan is not in operation.

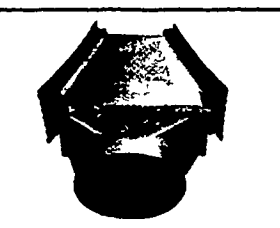


LARGER FILL CAP
Has wide, heavy gaug
39" opening allows
access and provides
four times as much
haust area.





CORRUGATED SEAL DOOR WITH SWING-AWAY INNER DOOR
Provides convenient access. All-welded construction and corrugated frame gives extra strength and an airtight seal.



OPTIONAL AERO-DYNAMIC TRANSITION UNITS WITH CORRUGATED COLLARS
Single and double. Perfectly matched to bins. Provide a proficient air delivery. Double units have dampers for single bin use.

TORNADO FANS AND HEATERS SERVICE FREE, PUSH-BUTTON OPERATION
Fast and sure grain conditioning at the flip of a switch. Newly engineered fans and heaters assure efficient drying air regardless of weather conditions. Available for natural or LP gas.

RUGGED TIE DOWN BRACKETS
Assures lasting stability. No drilling necessary. They bolt directly to bin wall. Foundation anchors and J-bolts included as standard.

SOLID DOUBLE BOLTING
Provides more rigidity and moisture protection at vertical seams. Sidewalls have 1.25 ounces zinc per sq. ft., providing long life and durability.

Charbray Cattle Breed Promoted

Moves to strengthen and expand the Charbray breed of beef cattle have been initiated by American-International Charolaid Assn., parent registry for the Charolais-Brahman based cattle.

Member have approved production rules establishing new percentages of Charolais and Brahman blood in registered Charbray, and also opened breeding privileges to half blood Charolais-Brahman bulls to produce the basic Charbray animal.

New rules define the Charbray animal as one containing from five-eights to seven-eights Charolais blood and the balance from registered Brahman. In essence, the ratio is three-quarters Charolais, one-quarter Brahman with one-eighth tolerance on either side.

"Thus, the Charbray producer may reach established Charbray blooded animals in two breeding seasons," explained Dr. J. W. Gossett, executive vice president. "Registered purebred parents may be used on the first cross to establish the foundation half-blooded animal, and that animal then bred to a purebred to establish to three-quarter Charolais-one quarter Brahman ratio."

The new rules also permit the use of registered purebred Brahman bulls on registered purebred Charolais cows to produce the foundation half-blooded animal. Either male or female progeny of that cross may be recorded in the Charbray herdbook and then mated to 15-16 Charolais or purebred Charolais to produce Charbray.

In all instances, parents must be registered or recorded with their respective breed associations. Also, animals not meeting the specific Charbray percentage for registration as a purebred, will be recorded in the Charbray appendix as to percentages of Charolais and Brahman for pedigree purposes.

Charbray became an established breed in this country in the late 1940's when purebred Charolais bulls were imported from Mexico and crossed on Brahman cows. The breed was widely used in the southern and southwestern states but gradually diminished in numbers as the popularity of Charolais increased. The American Charbray Breeders Assn. merged into the American - International Charolais Association's Charbray division in 1967. Until that time, both organizations maintained registration papers on the breed.

Guard Against Tetanus

Springtime is plowing season for those who farm for a living and for those who are trying to beat the high cost of living by cultivating vegetable gardens. Because of their close contact with the soil, farm implements and animal manure, both farmers and gardeners are extremely vulnerable now to tetanus.

"Those who are not immunized against this dangerous, often deadly, disease are at risk if they are injured by a contaminated object - and they will have only a 50 percent chance for survival in spite of the best possible treatment," reports Dr. W. D. Schrack, Jr., director of the Bureau of Adult Preventive Health Programs and acting director of that bureau's Division of Communicable Diseases, Pennsylvania Department of Health.

Tetanus spores enter the body at the sight of an injury, often a puncture wound. (Up to 20 percent of the wounds people receive are so minor that they don't remember when they got them."

The disease can develop in as little as four days. It is characterized by painful contractions of the muscles of the jaw and neck.

Often called "lockjaw", tetanus can be completely prevented by a series of immunization shots. Small children are effectively immunized with three or more properly spaced doses of tetanus toxoid. To keep immunization levels high, older children and adults should be sure to have booster shots every ten years.

"Tetanus is not a seasonal disease, but it is more apt to occur in rural areas. That is why we are trying to call attention to its dangers at this time when so many people are preparing their fields and garden plots and planting and sowing," Dr. Schrack said.

Dr. Schrack advises anyone who is not immunized to see his physician without delay to receive the series of life saving shots.

Fertilizer Co. Gets New Owner

Lancaster Bone Fertilizer Co. owner John C. Hoffman reported this week that the company is being sold to Jack Dantinne.

Dantinne was formerly a general manager for W. R. Grace and Co., where he worked for the past ten years. He is a University of Delaware graduate, and grew up on a farm in southern New Jersey.

Hoffman said he has sold a share of the business to Dantinne, and plans to gradually phase himself out of the business.

Lancaster Bone Fertilizer has factories in Quarryville and Oxford. Hoffman joined the firm in 1938 and worked with the late H. W. Huffnagle for 18 years before purchasing the business in 1957.

Angus Breeders Stress Need For Good Records

Pedigrees, both of known ancestry and production, will become more important to commercial cattlemen in the years ahead when they buy bulls, agreed a committee of five commercial cattle breeders at a special meeting in Saint Joseph, Missouri, recently.

With the increased use of crossbreeding in recent years, known purity of blood of one breed is as important, or more important than ever, the men said, but to a man, they pointed out that it is going to be increasingly difficult to merchandise breeding stock in the years ahead without accurate, reliable production records.

The cattlemen, members of a newly appointed American Angus Association commercial beef cattle committee, are all commercial breeders who have straightbred Angus herds. They are Wayne Brooks, Bowman, North Dakota; Merlyn Carlson, Lodgepole, Nebraska; Dwain Penner, Mill Creek, Oklahoma; Floyd Mills, Sedan, Kansas; and Bowmar Virden, Jackson, Mississippi. Chairman of the committee is Robert Giess, Arnold, Kansas, a registered Angus breeder and member of the American Angus Association board of directors.

There is never going to be widespread use of conventional production records programs in commercial cattle herds, the group concluded. While most of the committee members do have their cows individually indentified, the men do not keep individual weaning and yearling weights. This involves much more work than it is worth, they said, and for that reason they believe commercial cowmen will continue to depend on purebred breeders to measure individual productivity, especially bulls.

"Commercial cattlemen must by necessity deal more in averages," one of the cowmen pointed out. "I know the average breeding date of my herd, and I weigh all my calves at weaning time by sex and age groups to get an average weaning weight, but individual records are too hard to get and of too little value."

The reason individual records on commercial cattle aren't of much use, the men said, is that a commercial cattleman can't afford to cull cows that calve early and calve every year, just because their calves' weaning weights are below average. The cost of producing her replacement, plus the corresponding low production of first, second and even third-calf heifers often would not be offset by increased production later in the cow's lives. By the same token, they pointed out, early calving and regular production are so important that a cowman can't afford to keep a late calver or irregular calver in the herd regardless of the kind of calf she produces.

It is the registered breeder who must make full use of production records, the committee reported, and then pass the benefits on to commercial breeders through imporved bulls.

The group also agreed that they want as much production information as possible when selecting bulls. The use of weights only or ratios only is misleading in many cases, they pointed out. Their preference is for both weights and ratios along with the number of contemporary animals weighed and ratioed in each group.

The value of bull test stations was also discussed in detail during the eight-hour meeing. Despite some problems, the men were unanimous in the belief that test stations have been helpful to them and to the beef cattle business. They see increased future value in test stations as higher feed costs force reduced feeding periods.

Cattle Judging Slated at PSU

Dairy cattle judging, first event of the 50th Annual Dairy Exposition at The Pennsylvania State University, will be held Saturday, April 12, at the Dairy Production Center, University Park. The contest will feature 4-H and FFA members, along with Penn State students.

Contestants will compete for 12 awards and 5 rotating trophies. The high individual overall in 4-H and FFA, and the high individual for each breed in 4-H and FFA, will receive awards.

Invitations to compete have been sent to FFA and 4-H clubs throughout the Commonwealth. The rotating trophies will be given to the high 4-H team, the high FFA team, the high individual amateur, the high individual professional overall, and the high individual professional in oral reasons.

This year's contest is under the direction of co-chairmen Steve Lyon from Troy and James Bates from Jamestown. The annual Dairy Exposition is presented by the Dairy Science Club at Penn State. FFA and 4-H members will compete in separate classes and Penn State students will take part in amateur or professional classes. The latter includes Penn State students who have taken a course in dairy cattle judging or have competed in intercollegiate judging.

The contest will begin at 9:30 a.m. April 12 at the Dairy Production Center. Judging classes will be held in the morning and oral reasons will be given that afternoon in Borland Laboratory. All scores will be tallied that night and the respective winners will be notified. Awards will be presented at a banquet on May 3.

Judges for the contest will be recipients of the Clyde N. Hall award since 1954. The Hall award is given each year to the high individual on the Penn State Dairy Cattle Judging Team.

FFA contestants will give two oral reasons, 4-H contestants will give three reasons, and professionals will give five oral reasons for their selections. Teams of four members will compete in each class. The three highest scores of each team will be used in score evaluation.

The Penn State Dairy Exposition will include a Dairy PRINCESS Contest on April 23 and will be climaxed with "show day" on May 3. Events of May 3 will include a dairy cattle fitting and showing contest, a celebrity milking contest, a sorority milking contest, a fraternity milk "chugging" contest, and a calf dressing contest.

Use Judgement In Buying Manure Spreaders

Farmers and ranchers who are looking at new manure spreaders as a means of utilizing what has become a very valuable source of fertilizer should be careful when they compare the capacity of various brands of manure spreaders.

That's a word of caution from Adam Gehr, product manager for spreaders at Sperry New Holland. Gehr spends many hours with farmers discussing spreaders and has found that many are not yet familiar with new standards that have been set up for accurate measurement of spreaders.

"Most farmers still think in terms of bushels when they talk about spreader capacity," Gehr says. "But this can be very misleading."

Explaining why farmers are sometimes confused, Gehr points out that by talking in terms of bushels, various manufacturers have been able to come up with some pretty astounding figures for the capacity of their spreaders. But when compared to the new American Society of Agricultural Engineers (ASAE) standard for measuring spreaders, these claims become a matter for the careful attention of farmers.

The ASAE adopted cubic feet as its official measurement for spreaders in 1971. This came about because engineers who work with these machines day in and day out, found it was the best and most equitable method of comparing load size, Gehr says.

Prior to the ASAE standard, manufacturers measured the capacity of their spreaders with a variety of measuring criteria. Some included the entire box, front to back with a heaped load consisting of whatever was piled on the spreader at the time the measurements were made. Others used more realistic figures based on measurements taken from the front to the beaters with a reasonable amount of heaped load that would stay on the spreader while transporting to the field.

Under the ASAE standard, two different types of loads must be expressed - struck load and heaped load. When the farmer sees measurements of a spreader in catalogs and literature are according to the ASAE standard, he will know the measurement was done in a prescribed manner. This will make it easier to compare with other spreaders which have their capacities rated according to the ASAE standard.

"If the new ASAE cubic feet capacity is not used to show a spreader's capacity, the farmer should inquire and make certain he's not comparing apples with oranges," Gehr says.

The product manager cites two cases called to his attention when Sperry New Holland revised its catalogs to comply with the ASAE system.

"In one case a spreader manufacturer had been claiming a model of spreader was a 230 bushel capacity spreader. Our competitive model was listed as a 210 bushel machine. But under the new ASAE system - and remember, this was set up by engineers as a fair measuring method - the competitive machine was only 207 cubic feet while our machine was 210 cubic feet," Gehr says.

Gehr also cites the bushel comparison of another manufacturer's claim against another competitive Sperry New Holland machine.

In this case the competitive machine was listed in catalogs as having a 365 bushel capacity. The Sperry New Holland spreader was listed at 358 bushels. When the new ASAE standards were applied, Gehr says, the competitive machine came up with a 312 foot cubic foot measurement against the Sperry New Holland spreader's measurement of 341 cubic feet.

The product manager says he believes with the high cost of fuel, the time requirements farmers face in producing more, and to make the profit side of the farm ledger come up more in his favor, the farmer is becoming a careful shopper.

"The use of a standardized measurement - like the ASAE standard for spreaders - is helping the farmer make wiser buying decisions," Gehr says.

Pa. Nut Growers To Meet

The Pennsylvania Nut Growers Association will be holding a meeting on Saturday, April 12, 1975 from 10:00 a.m. to noon at the Kutztown Grange Hall, Kutztown, Berks County.

Grafting demonstrations will be held along with an exchange of scion wood for this area. Growing information will be distributed. Nut equipment and tools will also be available.

All interested persons are invited to attend.

Enjoy Pork and Beans

If you're one of the many consumers who enjoy canned dried beans, especially pork and beans, you'll be interested in a recent U.S. Department of Agriculture action. USDA is proposing the establishment of U.S. grade standards for canned pork and beans and a revision in the current standards for canned dried beans.

You can comment on the proposal - favorably or unfavorably - until April 15.

According to officials of USDA's Agricultural Marketing Service, the new standards are being proposed to adequately reflect current practices in the processing of beans. Canned pork and beans (canned dried white beans and pork with tomato sauce) comprise the major portion of canned dried beans packed in the United States. In spite of this fact, they are currently graded for quality under standards for canned dried beans. The standards for canned dried beans, in effect since 1947, include beans in several types of packing media - brine, tomato sauce, sweetened sauce, or tomato sauce with pork.

The proposed standard would make needed allowances for the various characteristics of the different sauces available, especailly for pork and beans. It would recognize the sauce as more than a packing medium since the sauce is always consumed along with the beans and contributes to the flavor and consistency of the product. It also would specify the required proportion of sauce and beans in the product.

Seasoning ingredients and types of white beans used in canned pork and beans may vary from one geographic region to another to accommodate consumer taste preference. These variations in pork and beans would be more fully covered in the proposed standard than they are in the present standards.

If you would like to comment on this proposal, written comments should be sent in duplicate to the Hearing Clerk, Room 112A, U.S. Department of Agriculture, Washington, D.C., 20250.

Copies of the proposal on pork and beans and on revisions to standards for canned dried beans are available from the Processed Products Standardization Branch, Fruit and Vegetable Division, Agricultural Marketing Service, U.S. Department of Agriculture, Washington, D.C. 20250.

If you have questions on how to comment on grade standards, write for "Food Quality - What You Can Do About the USDA Grades" (AMS-562). Send requests to the AMS Information Division, U.S. Department of Agriculture, Washington, D.C., 20250. Please include your zip code in the return address.

Harrisburg Approved As Livestock Port

TRY A CLASSIFIED

Animal handling facilities at the Pennsylvania State Fairgrounds, Harrisburg, Pa., have been approved by the U.S. Department of Agriculture (USDA) as a port of export for air shipment of livestock.

Officials of USDA's Animal and Plant Health Inspection Service (APHIS) said the facilities, located in the livestock portion of the Farm Show Building, meet federal requirements for handling and examining livestock prior to export. APHIS approval also provides for shipment of the animals through the Harrisburg International Airport.

All animals passing through livestock export terminals must be examined by APHIS veterinarians to assure that they are free of communicable disease and that they meet the health requirements of the receiving nations.

APHIS officials have previously approved use of the Farm Show Building for livestock exports under special temporary permits; however, with steadily increasing use, action was taken to formally designate Harrisburg as a port of export for livestock.

In recent years Harrisburg has become the principal export terminal for shipping Holstein-Friesian dairy cattle. During the six months from July through December 1974, fourteen shipments totalling 1,461 head of cattle were processed at the State fairgrounds and shipped out of the Harrisburg airport.

APHIS officials noted that export operations must be suspended when major shows are held in the Farm Show Building during four weeks of each year: the Pennsylvania Farm Show in January, the Eastern Sports show in February, the All-American Dairy Show in September, and the Keystone International Livestock Exposition in November.

APHIS standards for approved export facilities include: Proper lighting and restraining devices for veterinary examinations; paved, skid-resistant floors for pens and chutes; safe gates and fences; adequate space for handling each shipment; separation of different lots of livestock; and provisions for feed, water and shelter.

In addition to Harrisburg, ten other locations have been approved for general livestock export by air: Richmond, Va.; Miami, Tampa and St. Petersburg, Fla.; New Iberia, La.; Houston, Tex.; San Francisco, Calif.; Portland, Ore.; Moses Lake, Wash.; and Honolulu, Hawaii.

New York City and San Juan, P.R., have been approved for limited shipments of horses by air or sea.

APHIS has also approved ten ocean ports, ten Mexican border ports, and about 50 Canadian border ports for the export of animals.

Notice of this action will be published in the March 6, Federal Register and becomes effective immediately.

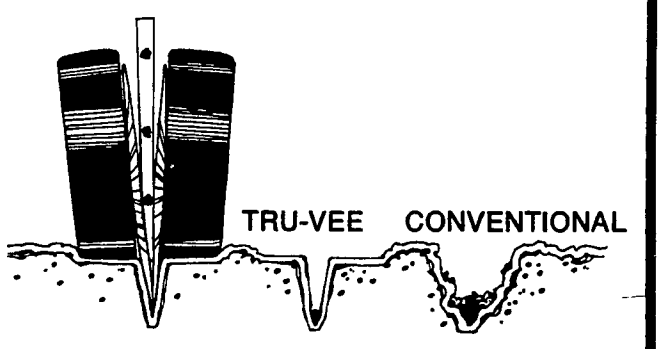
New Max-Emerge™ Planters feature Tru-Vee™ openers for best seed/soil contact

JOHN DEERE

Just one of our down-to-earth ideas to help you get a better crop stand



New Tru-Vee opener earns its name from the seed trench it carves. Sharply-angled disks cut a very narrow V in the soil. The V traps falling seed in optimum contact with firm soil. The opener was designed to eliminate germination-robbing air pockets in the seed trench and place seed in the best possible environment for fast germination and emergence. Stop by soon for more details on Max-Emerge Planters.

Cedar Crest Youth Receive FFA Awards

Future Farmers and their parents met on Thursday evening (March 20) for the 10th Annual Cedar Crest FFA Banquet in the Cedar Crest High School, Lebanon County.

Dennis Brubaker, president, gave the welcoming address with J. Gordon Hitz, vice-president introducing the guests present. Terry Murray, the state secretary, offered greetings from the state organization.

Receiving blue ribbon awards for the Lebanon County Project Book Contest were Glenn Bollinger, Tim Dundore, Tim Krall, Ray Moyer, Jeff Heisey, Elvin Gingrich, Richard Krall and Glenn Engle.

The Chapter Star Green Hand award was presented to John Krall with Dennis Brubaker receiving the Chapter Star Farmer award. Glenn Bollinger was recipient of the Chapter Star Agribusinessman award with Richard Krall receiving the Outstanding Dairy Award. Dennis Brubaker also received the Outstanding Crop Award with Ralph Dengler receiving the Outstanding Mechanics Award and also the BOAC Area Award.

National FFA Foundation Awards were presented to: Tim Dundore - Public Speaking; Richard Krall - crop production, Henry Heagy - agricultural mechanics; Robert Adams - ornamental horticulture; Glenn Bollinger - Sales and Service; Richard Krall - dairy farming; Tim Dundore - agricultural production; Jeff Heisey - beef production; Mike Kneasel - soil and water management; J. Gordon Hitz - swine production; Elvin Gingrich - forest management and Mark Pajski - ag processing.

Special awards were given to Mark Hitz for having been in the State FFA Band for six years and to Richard Krall for his excellence in scholarship, leadership and supervised farming program (Dekalb Award).

Harvey Smith, area supervisor of the Vo-ag program presented Glenn Bollinger, Richard Krall and Dennis Brubaker with pins to recognize their status as Keystone Farmers.

Richard D. Moore serves as advisor of the Cedar Crest FFA and also as the agriculture instructor.

Conservation Funds Soon Available

Lancaster County's agricultural conservation program will be announced in the near future, it was announced by Miss Dorothy Neel, executive director of the Agricultural Stabilization and Conservation Service. This is the program that offers cost-share payments to farmers for the completion of conservation practices.

Last year, there was some $40,000 in conservation funds available for the county, Miss Neel said. This was enough to take care of about 40 requests from farmers.

ASCS offices in all Pennsylvania counties have been authorized to begin accepting applications for certain practices which are eligible for funding under the program.

The practices are:

- Establishment of permanent vegetative cover on farmland subject to erosion, where the land is being permanently removed from the regular crop rotation.
- Planting trees to establish a stand for timber production.
- Stripcropping.
- Sediment, chemical or water runoff control measures such as sod waterways, vegetated filter strips and similar measures.
- Forestry incentive practices.

County ASCS offices will be accepting applications now from farmers who are interested in any of these practices Miss Neel said requests for long term agreements won't be accepted at the present time. She did say, though that annual practices approved now might possibly be transferred to long term agreements at a later date.

Corn Cut Back

[Continued from Page 1]

County. "But I'm going take a licking," he said, "if corn get down to $2 a bushel."

Donald Hershey, Manheim R2, is a more typical corn grower in this area in that he feeds the majority of his crop to his own livestock. Hershey sympathized with the corn growers in the Midwest, pointing out the price of fertilizer alone has virtually tripled in the past three years. But he said he doesn't know of anybody who's going to join in a national movement to reduce crop acreage.

Louis Moore, an extension ag economist at Penn State, said he is skeptical that the cut back idea will work. At this point, time is definitely a factor. Wefald and the other movement leaders would have to get the growers committed in the next few weeks. Corn planting in Iowa, for example, normally starts about April 20, with Pennsylvania growers in the field about the same time.

If they were successful in getting a cut back, what effect would it have on prices, we asked Moore. "If farmers cut back 9 to 12 percent, and domestic use stayed the same, the corn price would go up 40 to 45 percent," Moore replied. "But I just don't think they can do that on a nationwide basis. There's just not enough time, and besides, farmers are too independent."

Moore pointed out that the USDA's March 17 planting intentions report showed farmers expecting to plant about three percent less corn than last year. This was down from the January intentions report, which showed them planting about the same acreage as in 1974. "The biggest reason for the cutback, though has been the drop in grain prices since January. People were looking for $4 corn, and it just didn't happen."

On Thursday afternoon, dealers in Lancaster County were offering farmers $2.80 to $3.00 for their shelled corn, reflecting the slide in the price on the national markets.

Moore said he didn't think a three precent cutback was severe. "If we get 93 bushels to the acre, and have 75.3 million acres planted, we'll still have a pretty big crop. Normally in the past, the March planting intentions have been a pretty reliable indicator of what the farmers will do. That may change this year because of this movement. Or it could change because of a wet spring. A lot of things could change their intentions, but I just don't see it hapening."

No matter what happens, Moore doesn't think the corn price will dip to the $2 level which would be ruinous to the nation's farm economy. "We've had a lot of wild swings in the past year or so. We've had bad weather, we've had more of our crop going onto the world market, and we've seen the effects of getting the government out of our grain farming picture.

"We've seen some massive adjustments, and I think the market will settle down. We're on a free market now, and you'll see some price movement, sure. But the general thinking is that corn price will stabilize at a level that's profitable to farmers."

Grangers Support Higher Farm Prices

The Pennsylvania State Grange recently urged prompt Congressional action on a national emergency farm plan to "restore economic stability to agriculture in the United States."

In a letter to Pennsylvania Congressmen, State Master J. Luther Snyder expressed the Grange's support of pending legislation (H.R. 4296) that would raise floors under farm prices and help offset high production costs.

"This legislation," Snyder said, "is an emergency measure to help ease the financial bind of farmers in 1975. We also need a long-range farm program that will be beneficial to both farmers and consumers.

"It is particularly important," he added, "that steps be taken to assure continued production on American farms to meet domestic and foreign need for ample food for all people."

The State Grange action followed a meeting earlier in the week when the National Farm Coalition approved a position statement calling for "meaningful price protection" for American farmers. The Pennsylvania State Grange was represented at the meeting by Clifford W. Tinklepaugh, of Thompson, Susquehanna County, chairman of the State Grange's dairy committee.

The Coalition statement pointed out that "price protection is imperative now as farmers plan and plant their 1975 crops to give them confidence and make possible abundant harvests for a hungry world." And, the statement added, "consumers deserve adequate supplies of food at reasonable and stable prices."

John W. Scott, Master of the National Grange and a resident of Mechanicsburg (Pa.), headed a steering committee that drafted the Coalition statement. The statement also called for a new Federal food and agriculture act to assure "adequate price and income incentives for farmers and ranchers."

In addition to the National Grange, other major farm organizations that approved the Coalition statemnt were: National Association of Wheat Growers, United Grain Farmers, National Farmers Organization, National Wool Growers Association, National Corn Growers Association, National Milk Producers Federation, National Peanut Growers Group, National Association of Farmer Elected Committeemen, Grain Sorghum Producers Association, Midcontinent Farmers Association, the Cooperative Council of North Carolina, and the Webster County, Nebr., Farmers Organization.

Farm Suppliers Visit Mexico

Two area couples recently returned from a trip to Mexico. Mr. and Mrs. Daniel M. Wogelmuth, Mt. Joy, along with Mr. and Mrs. Martin K. Miller, Mt. Joy visited Mexico on a trip - sponsored by the New Holland Supply Company and the Pfizer Company.

The trip was a gift to Mr. Miller who has partially retired from Wogelmuth Bros. feed mill in Mt. Joy after 45 years of service.

Penn Manor Youths Receive FFA Awards

The Manor FFA chapter of the Penn Manor High School held their annual banquet on March 13.

Clyde Hunt received the Honorary Chapter Farmer award while Elmer Rohrer, Ralph Frey, Isaac Hunt, Lewis Bleacher, James Heth, Shirley Warfel and Mervin McMichael were presented with certificates of appreciation.

Youths honored at the recent Penn Manor FFA banquet included: from left: Bob Hess - Star Chapter Farmer; Ron Hunt - president; Steve Shertzer - Star Green Hand and Carrol Herr (back) Star Red Rose Farmer.

The Star Green Hand award was presented to Steve Shertzer by Ron Hunt. The Star Chapter Farmer award was presented to Carrol Herr by Earl Gerlach. Keystone Farmers receiving honors were Charles Kauffman, Robert Buckwalter, Wendell Kibler, Randy Hunt, Rick Burkholder and Gary Long.

Charles Kauffman and Herb Wherry were recipients of the Hunting contest awards, while and FFA Chain gilt award was given to Jim Breneman, Steve Charles and Earl Linderman by Bob Hess. Bees were presented to Bill Karman, John Mylin, Kevin Kilheifer and Dean Neff by Chris McCarty. Honored for their outstanding efforts in the citrus sale were Carrol Herr and Doug Eckman.

A folktale among American Indians tells of a man who loses a leg, sharpens his shin bone, and uses it to stab his visitors.

Don't Rush the Season

Give most gardeners a few good days of "false spring" and they're raring to get started on their gardens. This eagerness is understandable, but rushing the season can net you some problems, cautions University of Delaware extension garden specialist, Dave Tatnall. Cold, wet soil generates disease conditions in both seeds and plants. It also causes slower germination of seeds.

Seeds must have the proper temperature and moisture conditions to germinate, explains the specialist. Some seeds will sprout at soil temperatures of less than 50 degrees, but most require temperatures between 60 and 70 degrees to germinate and grow.

Planting seeds outdoors must be carefully timed to provide these temperatures. Peas, lettuce, radishes, onions, spinach, turnip greens and collards will all grow well in cool soils - which means they can be planted towards the end of March. But lima beans, cantaloupes, watermelons and pumpkins like warmer soil. It's usually best to wait until after May 15 before seeding them.

Moisture is another important factor in seed germination. For best results, plant small seeds like petunia, onion and carrot in vermiculitle, perlite or peatlite mix. Make a furrow an inch wide and about an inch deep and fill this with vermiculite. Scatter the seed on the surface. Then lightly cover it with fine soil and water thoroughly.

A variation on this approach is to mix vermiculite and garden soil in a bucket, moisten the mixture enough to keep it from blowing away - without being muddy - and spread this along your seed furrow. Scatter the seed over this and cover lightly with fine soil.

One of the reasons gardeners rush the season on seeds and plants is their eagerness to get early yields. This often happens with tomatoes. But you should wait at least until May 1 (preferably May 15, the frost-free date in this area) before putting plants in, says Tatnall. It's something of a fallacy, anyway, to think you can get a jump on tomato yields by very early plantings. Most tomatoes won't set fruit until night temperatures reach 60 degrees.

Money Management

Printed as a public service by the Lancaster Farming and the Pennsylvania Institute of Certified Public Accountants.

Often, in the sale of a house, the seller will offer certain extras--such as carpeting or appliances–for an extra payment. If the extra payment is lumped with the amount paid for the house it could bring a higher real estate tax assessment. To avoid this, you may be better off paying for the extras with a separate check.

Real Estate

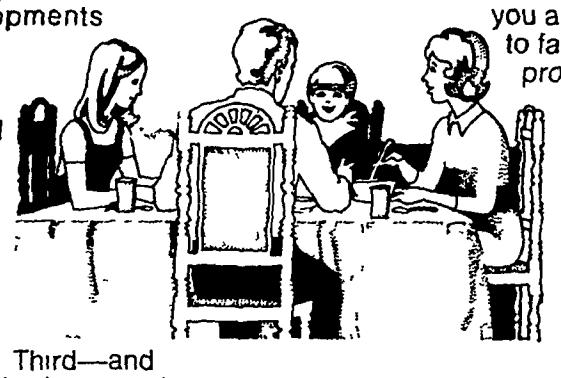
If you're optimistic about farming in 1975 — you're right!

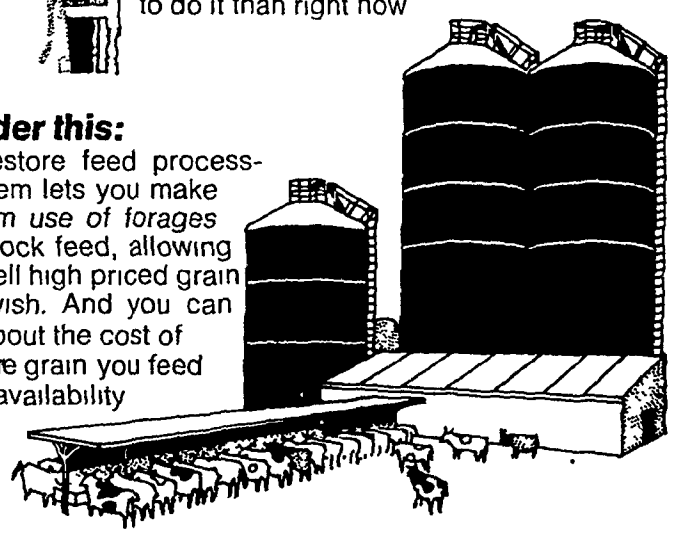
Part of the story you've heard before:
The world needs more food than it can produce, population keeps on growing and the people of the world insist on eating better every year. Now add these developments First, the "cheap protein" plan for feeding the poor people of the world doesn't look as promising as it once did Second, the idea of opening up whole new areas of the world to farming doesn't look so hot, either Third—and most important—we've been on this course now for many years and time is running out



Main Point:
One real ray of hope is you and your ability to produce food. Regardless of weather and the rest of the economy, the people of North America and the rest of the world want what you produce—and all indications are that in the final analysis, they're going to be willing to pay for it.

It's true . . .
you are going to continue to face rising costs of production, increased taxes and higher land costs. However, you have the opportunity to become more efficient and there'll never be a better time to do it than right now

Consider this:
A Harvestore feed processing system lets you make maximum use of forages as livestock feed, allowing you to sell high priced grain if you wish. And you can forget about the cost of drying the grain you feed and the availability of fuel to operate the dryer because you can store high moisture grain. Even if drought or early frost cost you your entire grain yield, you can salvage about 40% of the feed value of the plant by processing the stalks and husks through your Harvestore system.



Finally,
we should add this We're not asking you to do anything we don't expect to do for ourselves For instance, we have just completed a multimillion dollar expansion program that doubles our capacity for building Harvestores and we've asked our dealers to grow along with us so that they can continue to be in a position to give you the products and services you need when you need them

The new DeKalb, Illinois plant is just under 10 acres under one roof This will double the company's ability to produce Harvestore structures

WHAT YOU WANT, WHAT YOU EARN, AND A HELPFUL BOOK THAT GETS IT ALTOGETHER.

It's remarkable how so many people learn to make money and never learn how to spend it Which brings up a word that doesn't have to be as bad as it sounds — budget. There can be all kinds of budgets — budgets that build security, budgets that let you enjoy your money while you make it It's all a matter of figuring out what you want, how much money you earn, and how to get it altogether. We've got a free book on the subject of budgeting that can help you No It's not written in bank language and it doesn't "tsk-tsk" you for not budgeting It does tell you how to go about budgeting intelligently and realistically

Simply stated, it can be helpful Which is what we want to be as a bank.

Guernsey Breeders Annual Tour Set

Lancaster County Guernsey Breeders annual tour will be held March 31. The chartered bus will start at the Willow Street Mennonite Church at 8:30 a.m. The bus will make a stop at 8:45 at Mussers store at the Buck to pick up more passengers.

The tour will go to Evans Building Products Co., New Freedom, the largest oak veneering plant in the world. From there, they will go to Leader Farms, also in New Freedom. The Leaders have an 85-cow Guernsey herd and a 15,000 caged layer operation.

Harold Miller's small Guernsey herd in New Oxford will also be visited. The Millers had the highest Guernsey butterfat record in the state in 1974.

The tour will then visit Rutter Brothers Farm, a 75-cow herd in York. The tour will return home about 5:00 p.m., and all who take the tour are advised to take a box lunch.

For more information, contact Kenneth Garber, chairman, 464-2894, Bob Wagoner, 529-2831 or Neil Johnson, 548-2430. The approximate cost will be $3 per person, with a special rate for Guernsey 4-H.

Chester Co. Grain Meet Scheduled

A Chester County meeting on grain marketing will be held on Wednesday, March 26, in the vo ag room at Octorara High School. The meeting is being sponsored by the Chester County Extension Service.

During the meeting, Louis Moore, a marketing specialist will talk about grain futures. He'll explain what futures are, how they can be used to hedge crops, and how they can be used to speculate. Moore will also present a comparison of hedging and production contracts.

Joseph McCurdy, an agricultural engineer from Penn State, will tackle the subjects of storing and drying grain. He'll discuss economics of drying systems, look into drying both with and without heat, and also talk about storing grain safely without drying.

For more information, contact county agent Glenn A. Shirk at the Chester County extension office.

For Virginia Kloss . . .

Sewing is Relaxing and Rewarding

by: Sally Bair
Farm Feature Writer

"Sewing is relaxing and rewarding, and I love every minute of it. It is my recreation." Those words were spoken enthusiastically by Mrs. Virginia Kloss, a well-known face to many of Lancaster County's best seamstresses.

Virginia is a sewing teacher for the Penn State Extension Service, and has been offering advice and training to county homemakers for the past five years.

Taking a sewing class from Virginia means more than just learning to sew — it is a unique experience. As she teaches the basics of each course, she spices the learning with practical advice about sewing: where to find the best buys in fabrics, which needle to use with different fabrics and suggestions on how to get the most from your sewing machine.

The reason for the wide range of learning experiences in Virginia's classes can be attributed to her philosophy about sewing. She said, "I feel there are many reasons why a woman sews. Number one she wants to make something. Two it is an outlet for women - one day away from home. And three, we have fun."

And have fun they do, but never at the expense of learning what they came for. Virginia said, "Sewing is a fun thing, and I like to make sewing a relaxing hobby and avocation."

For her she says that sewing is "good therapy - it helps me to relax. If I have something on my mind, I go out and buy a difficult pattern."

Although she has been teaching sewing only for the past five years, Virginia says, "All my life I've sewn. I started in junior high school, and the greatest influence was my teacher. I idolized her, and from then on I was sewing."

While she has had no formal education in sewing, she has taken advantage of many opportunities for learning, including the adult enrichment classes at McCaskey, and the extension-sponsored sewing classes. In fact, it was one of those classes that opened the possibility of becoming a teacher.

At the time she first took classes from Extension Home Economist Doris Thomas there was no charge, but shortly thereafter the decision was made to hire teachers to meet the great demand. Virginia said that after this was mentioned in one of her classes she called Doris and asked if she could be considered. "I was so thrilled I cried when she said I could teach," she remembers.

Virginia started by teaching intermediate sewing, then took on the beginning class. She said, "It is harder to teach beginning sewing, because usually the women don't know anything about it and you have to really start at the basics."

A permanent cutting table with good light helps make Virginia's night-time sewing a little easier.

Along the way, she started teaching tailoring, then knits, then lingerie, then men's jackets and slacks and now she is offering a new course on sewing for children. In the course for children she said she will also teach some basic sewing techniques, because "many women will sew for children and not for themselves."

A very important thing to note about this sewing teacher is that she makes everything she wears. And she means this very literally, because as a teacher of lingerie, she also sews all her undergarments.

She said, "I sew for myself because I am very hard to fit. I could never find anything to fit and couldn't find clothes that are suited for the hard to fit. I can also be more selective when I sew for myself." She also admitted that she uses some of the same patterns over and over. She said, "I have one pattern that fits well, looks well and I feel comfortable in it, so I use it often."

How does Virginia keep up with new ideas in sewing? She said, "I look constantly for new ideas. I pick them up wherever they are. I read all the books available."

Her full-time job, aside from the many hours she devotes to teaching sewing, is working with her husband as co-manager of Spring Manor Apartments, Millersville Road. As she sits in the office during office hours, she studies new books and is currently delving into a new Bishop sewing book. She said the only magazine she subscribes to is Vogue.

To get ideas, she advises spending time in the better dress departments to see what's in fashion. She says laughingly, "You may not always like what's in fashion, but it does give you some insight and ideas for home sewing."

One of the first things a student of Virginia learns is that she knows where to find everything in sewing, from the most unusual notion to the latest gadget. As her husband Jack puts it, "We've been from Washington, D.C. to Plainfield, N.J. looking for fabric." And that includes towns like Reading and Chambersburg. "But," Virginia says, "my favorite place is still South Fourth Street in Philadelphia."

Many of her students have had opportunity to get acquainted with the very unique ways of merchants on South Fourth Street because once every spring and fall a bus is chartered to take the homemakers to Philadelphia to stock up on fabric. One of the reasons for sponsoring the trip, according to Virginia, is that "there really is no good supply locally of 100 percent wool. In the few stores that carry wool, the selection is very limited." Also, Virginia points out, "Tailoring is a lot of hard work, so I advise students to use good fabric for the best possible results." But, she adds, "When you start to tailor in a wool project, it gets expensive."

When asked how it is that she is able to comb every fabric store in such a widespread area, Mrs. Kloss says with a smile, "I have a very loving, cooperative husband who doesn't mind shopping." What does he do while she's looking at fabric? He's looking too, and selecting fabric for his own clothing. Virginia says, "I always tell my students when they are sewing for the men in their families they should make up what he wants. If he likes a fabric, buy it and sew it for him. If it's his choice he'll be happier."

Since they must be on duty at the 136-unit apartment complex even on weekends, the Klosses enjoy their day off by going shopping. The nature of their job leaves little time for outside activities. They have lived in the Lancaster area for 24 years, having moved here from Sharon.

Visiting Virginia's sewing room is a delightful experience that would make any home seamstress envious. She has a room which is solely hers with one of the most prominent features a permanent cutting table with excellent lighting. She points out that she often sews into the night, so good lighting is essential. She has shelving lined with fabrics she has acquired on her shopping trips and she has several garments in evidence that she is working on. Her sewing machine stands ready to work and, since "pressing is most important," an ironing board is set up ready to go.

Because she is often teaching several different classes at the same time, she may have three or four garments in different stages of completion. When asked how she

[Continued on Page 43]

Virginia shows some of the fabric she has purchased and is anxious to work with. On the shelves are other fabric pieces and Virginia has a finished garment planned for each.

Gardening Clinics Slated

Spring is officially with us now although the weather tends to remain somewhat fickle. The Old Farmer's Almanac described the month of March quite accurately by stating, "March is neither winter or spring but the period in between."

That description of March might well be true but the waiting period it offers can give a person the chance to plan their summer gardens with care and thought

Several of the area counties are planning garden clinics from now until the middle of April. They have been designed to answer the questions of the newcomers as well as provide information for the advanced gardener. I've listed below some of the clinics which will be held in the Southeastern Pa area, but for more information please consult your local extension office

York County· April 3, 7 30 p m - Farm Credit Building, 3301 W. Market St., York, April 7, 7 30 p m Centre Presbyterian Church, New Park, April 8, 9 45 a m - York Mall Community Room, 1 15 p m - Hanover Grange Hall and 7.30 p m Dillsburg Grange Hall.

Lancaster County· March 25 - 7 30 p.m Solanco High School vo-ag classroom - Quarryville; March 26 - Farm and Home Center at 7:30 p.m.

Chester County April 1 - 7.30 p.m - Devereux Foundation in Berwyn; April 2 - 7:30 p m Devereux Foundation in Berwyn, April 3 - 7 30 p m - Lincoln University Campus in the Ware Center Building in Lincoln University, April 7 at the Northern Chester Co. Tech School in Phoenix

The meetings have been planned for your convenience so why not attend and let experienced personnel answer the questions that you might have on gardening

Homestead Notes

Relaxing and Rewarding

[Continued from Page 42]

decided which one to work on, she says, "It takes discipline." She explains that she must make herself stop at a certain point on each garment and move on to the next, so that each one is at the proper stage to demonstrate the principles she is teaching.

She also has prepared samples of different techniques, and these she has neatly packed in suitcases for easy transporting. A suitcase is assigned to each sewing class, and there she keeps all the things she needs for that course. Five suitcases are in evidence, plus a large "flat" in which she carries her tailoring project. Anyone who has

In a tailoring course she teaches, Virginia is sewing a coat right along with her students.

taken her classes knows that she also carries along assorted other "goodies" in shopping bags. She laughs and says she couldn't make it to her classes without the help of her husband who helps carry the suitcases, bags and sewing machine.

Virginia is meticulous in keeping her threads and bobbins together and marked. She has boxes filled with patterns, and a separate one for Carol, her lucky daughter-in-law who benefits from her sewing expertise, as does her son, Tom. On her bulletin board she has pinned notes of appreciation from students, and newspaper clippings of styles from the New York Times which she will translate into lovely clothes for her daughter-in-law.

Virginia says that sewing now, instead of getting easier, is "a little more difficult. There are five different kinds of threads and regular, ballpoint and all purpose needles. There are also more stitches available." It is evident that she finds fascinating the wide range of fabrics, but adds that this variety contributes to the difficulty. As an example, she explains that since knits will dull a needle rapidly, the needle should be changed after each garment.

"Every new pattern and every new fabric brings a new challenge," she says with relish.

Virginia says there is a bigger response to sewing classes these days "because of the state of the economy. Basically women sew to save money - it is a saving hobby. Many women are also now sewing for sons and husbands."

One of the reasons she teaches sewing is for "self satisfaction," Virginia says, and adds, "I have had the most pleasant reactions from the groups."

Virginia Kloss makes it clear as she talks that sharing her vast knowledge of the world of sewing is a sheer delight. It's a love which she would like other women to discover - for the savings, for the relaxation and for the fun of it.

Farm Women Calendar

Saturday, March 22

Farm Women Society 4 entertaining Society 21 at the Ironville United Methodist Church for a luncheon at 12:30 p.m.

Farm Women Society 5 meeting at 1:30 p.m.

Wednesday, March 26

Farm Women Society 24 meeting at 7:30 p.m. Program will be on self defense.

Thursday, March 27

Farm Women Society 11 meeting at 1:30 p.m.

Farm Women Society 28 meeting previously scheduled for this evening has been changed to April 3.

Saturday, March 29

Orders must be in for Ham Sandwich sale for Farm Women Society 8 of Berks County.

Potato Facts

Once upon a time eating potatoes was considered a social error. In 1754, as quoted in the Journal of Agriculture, potatoes were "despised by the rich and deemed only proper food for the meaner sorts of persons." It's come a long way from the 1700's.

xxx

Today's potatoes are bred with all the care given to developing the finest race horses. Pure breeding has resulted in smoother-skinned potatoes of better flavor, texture, and productivity. Potatoes are now in especially heavy supply, reports the U.S. Department of Agriculture.

UNCLAIMED FREIGHT COMPANY and LIQUIDATION SALES

WE BUY BANKRUPTCY, GOING OUT OF BUSINESS, STORE & FREIGHT REFUSALS & LIQUIDATION FOR LOCAL FIRMS OF THEIR STOCK. BUSINESSES MOVING WE BUY THEIR INVENTORY UNDER WHOLESALE & SELL AT REG. Prewash Soil and Stain Removers

There are several methods of removing stains, prior to laundering. One of the newer innovations in laundry products is the prewash soil and stain spray remover.

Some manufacturers have specifically designed their product for use on permanent press and washable knit items as a means of loosening heavy soil and greasy oil. Since these fabrics have a tendency to retain certain stains that may not come out with regular laundering, the prewash products break down the oil, suspend the stain and let detergent and water, in regular laundering, wash the stain away. These and other prewash soil and stain removers may be used on all other washable fabrics, both white and colored.

As with any prewash product, it is always necessary to remove the spot or stain when it is fresh and before it has a chance to set.

Products may differ, but most manufacturers advocate that stains such as gravy, blood, chocolate, mustard, coffee, tea, grass, crayon, lipstick, antiperspirant, ball point pen ink and ground-in dirt on shirt collars and cuffs can be removed with a prewash soil and stain remover. Check label instructions for stains that the particular product will remove.

The technique consists of spraying the fabric, while holding the can from 3-8 inches away, and saturating the soiled area thoroughly. Spots should come out within 1-2 minutes — longer for stubborn stains. Should spots remain, they may be removed with a second application. After using the prewash product, launder clothing as usual. Directions for use of the aerosols state that they work well in hot or cold water and are not affected by bleach or other laundry aids.

As with all laundry products, it is important to read label directions for correct usage and follow good laundering procedures. These include careful sorting of garments; measuring amounts of products to be used; utilizing water temperatures, cycles and drying methods safe for colors and fabrics being washed.

Extension Cord Safety

If you must use an extension cord, examine it regularly for signs of cracking and wear. Don't chance a fire with a defective cord. Discard old cords when the insulation hardens or cracks.

Thin covers of insulation can wear off and allow the two wires inside to touch. When this happens, the fuse may not blow until the wires get as hot as the heating element in your toaster. In the meantime, the cord could ignite paper or cloth.

Buy extension cords designed for heavy duty use. The thicker rubber insulation protects the wires and gives longer service than will regular extension cords.

Limit the cord's length. Long cords contribute to voltage drop and power loss. For example, a voltage drop could cause the motor of your sweeper to overheat and wear out faster.

In addition, check the cord for the Underwriter's Laboratories (UL) seal of approval. This seal is your proof that the product has passed extensive tests and is safe to use.

The proper way to use an extension cord allows only one appliance for each cord. Putting more than one appliance on an outlet can overload the circuit. Do not use extension cords across traffic lanes, through doorways and under rugs. Even the heavy-duty cords will crack with constant crushing and bending. It's also dangerous to drape extension cords over nails and sharp objects during use and storage.

Money Management

Printed as a public service by the Lancaster Farming and the Pennsylvania Institute of Certified Public Accountants.

Couples who file joint tax returns should consider registering in both their names any stocks either of them may own. The first $100 in dividends a person receives are tax free and that limit holds for a person filing a joint return. But if both parties receive the dividends, the tax-free limit is raised to $100 for each of them.

Doctor in the Kitchen®

Consultant, National Dairy Council

Nutrition A La Carte

If your clothing seems to be shrinking, you may, in fact, be gaining weight. Tight clothes can be an early warning system that tips you off to what is happening. It's much easier and better to take off five pounds than 15. Just cut the helpings of the food you're already eating and you'll lose that five pounds.

A diet chosen by chance is not a good idea. For this reason you should not eat and drink whatever you want to and then take vitamin and mineral capsules to make sure you're getting the essential nutrients. With such a routine, your meals could still lack protein and energy and other essential nutrients.

Is fat essential in your diet? The answer is "Yes." Some fat is necessary for good nutrition. Some fats provide vitamins A, D, E, and K, and some are important as sources of essential fatty acids. Fat is a concentrated source of calories. The fats you use for energy will save protein for body building and repair. It's inefficient to use expensive protein as an energy source.

Remember the old tale about the human body being worth 98 cents for the chemicals it contains? Well, according to research scientists, the chemicals in the human body are worth much more today, about $800. The new value is due to the high cost of obtaining enzymes and nucleic acids in purified form for research.

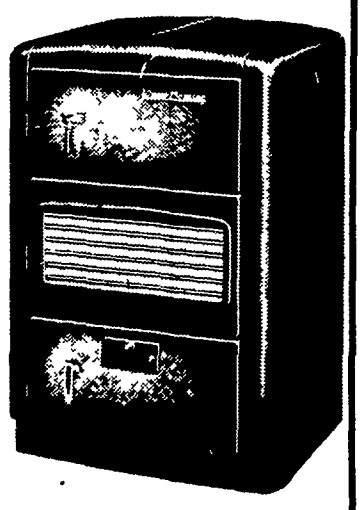
Here's a bit of history: The dish we call soup had its beginning in a tasty medieval snack called "Sop." A "Sop" consisted of bread chunks dipped in the broth of meat stews. Today's handsome varities of soup make it a staple in our meals. In all kinds of weather, there's a soup for every taste.

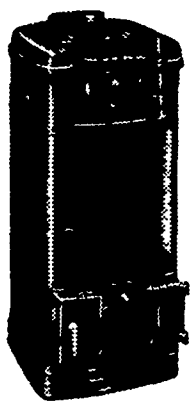
Poor diets have increased in America, according to the U.S. Department of Agriculture. A survey of 7,500 families revealed that calcium and vitamins A and C are the nutrients most often short in our meals. This is because less than the recommended amounts of milk and milk products and vegetables and fruits are used.

Sour cream is today's most sophisticated dairy food and as far as I can determine, it originated in Central Europe--a product of hard-working people of the Old World. People in the Slavic nations, particularly, love sour cream. Sour cream qualifies as a lowfat product--only 30 calories per tablespoon.

IN STOCK FOR IMMEDIATE DELIVERY
COAL & WOOD STOVES
Warm Morning COAL HEATER

Only a genuine Warm Morning has the famous patented 4-flue firebrick construction that turns coal into glowing coke... heats 24 hours or more without refueling. The little extra a Warm Morning costs originally is repaid over and over again in satisfaction and fuel savings!





MODEL 523 — Finest Blued Steel Radiant
Here's the quality leader in its field! Holds 100 lbs of coal Ample heat for up to five rooms Has many features combined in no other coal heater

MODEL 617 — 60 Pounds Capacity

MODEL 400 — America's Finest Coal Circulator!
The ultimate in luxury heating with coal or coke! Beautiful cabinet finished in life-time porcelain enamel Front feed door permits "no spill" filling Side doors open for quick radiant heat release Thermostat gives even temperature control Holds 100 lbs of coal — provides ample heating for up to six rooms!

Home on the Range

We thank all of our readers who sent in recipes for Shoo-Fly Pies and Union Pies. We received so many that we had to file some for future use! Many readers have requested recipes for Red Velvet Cake. If you have that one in your file why not send it along?

One of our readers sent in two special recipes which we are sharing with you this week - they are featured below.

Recipe for a Happy Life

Take a large quantity of cheerfulness and let it simmer without stopping. Put it with a brimming basinful of kindness. Then add it to a full measure of thought for other people.

Mix into these a heaping tablespoon of sympathy flavored with the essence of chairty. Stir well together and then carefully strain off any grains of selfishness. Let the dish be served with a sauce of love and the fruit of the Spirit.

Lucy Brubaker

A Recipe

A recipe's a funny thing,
It's quiet but so demanding;
And as you mix and stir, you must
Heed all of its commanding.

You must be careful as you work
And follow well each letter,
Or you will have a failure when
It could have been much better.

Lucy Brubaker

xxx

Pumpkin Cake

2 cups granulated sugar
2 cups pumpkin
1½ cups vegetable oil
4 eggs
2 cups flour
1 teaspoon salt
2 teaspoons baking powder
2 teaspoons baking soda
2 teaspoons cinnamon
½ cup chopped nuts
½ cup flaked cocoanut

Cream sugar, eggs, and add pumpkin, oil and beat well. Slowly add sifted dry ingredients. Beat well and fold in nuts and cocoanut. Bake at 350 degrees for 45 minutes. Use a 9 inch layer pan or 9 x 13 inch long pan. Frost with the following:

Frosting

¼ cup soft butter
4 ounces cream cheese
1½ cups confectioner's sugar
½ teaspoon vanilla
¼ cup chopped nuts
½ cup cocoanut

Arlene Weaver
New Holland, Pa.

xxx

Kix Candy

¼ pound butter
40 marshmallows
6 cups Kix cereal

Melt butter in pan and add marshmallows. Stir over medium heat till melted. Add Kix thoroughly. Pour in cake pan and press out evenly. Cool and cut in squares.

Verna Stoltzfoos
Leola, Pa.

xxx

Union Pie

2 cups brown sugar
1 cup molasses
1 cup cocoanut
3 cups thick milk
1 cup flour
3 eggs
1 teaspoon soda
1 teaspoon cinnamon

Bake at 350 degrees for 45 minutes. Makes three pies.

Mrs. Elam B. Stoltzfus
Leola, Pa.

xxx

Chocolate Shoo-Fly

2 cups brown sugar
1 cup shortening
2 eggs
½ cup cocoa
2 cups molasses
2 cups hot water
2 teaspoons vanilla
2 teaspoons soda
¼ teaspoon salt
½ teaspoon cinnamon
5 cups flour

Bottom part-chocolate custard make like corn starch and cool before putting into crust.

2 cups granulated sugar
2 tablespoons cornstarch
2 tablespoons flour
2 tablespoons cocoa
butter the size of a walnut
2 eggs
2 cups water
1 teaspoon vanilla.

Divide evenly into 6-8 crusts. Bake at 350 degrees for 50 minutes to one hour. When cool spread with chocolate frosting.

Barbara Stoltzfus
Narvon, Pa.

xxx

Elegant Jeweled Easter Egg Salad

1 large can apricots
1 large can sliced pineapple
2 (3 ounce) packages orange jello
2 cups boiling water
1 cup orange juice
1 tablespoon lemon juice
½ cup chopped nuts

Drain apricots and pineapple. Dice and combine fruit syrups, reserve one cup for dressing. Dissolve gelatin in boiling water add juices. Chill till slightly thickened. Fold in fruits and nuts. Pour in lightly oiled 1-½ quart melon mold. Chill till firm.

Fluffy Fruit Dressing

Combine ¼ cup sugar, 2 tablespoons cornstarch in 1 quart saucepan. Add 1 cup of the syrup, 1 slightly beaten egg, 2 tablespoons butter and cook over medium heat stirring constantly till mixture is thickened. Cool. Whip 1 cup cream till very stiff. Beat cornstarch mixture till smooth. Mix in whipped cream.

Grass

Dissolve 2 (3 ounce) packages of lime jello in 2 cups hot water. Add 1 cup cold water and chill to firm. To serve, put lime jello through ricer and unmold fruit on grass and garnish with dressing.

Mrs. A. B. Stoltzfus
Oxford, Pa.

xxx

"No Cook" Marshmallow Frosting

¼ teaspoon salt
2 egg whites
¼ cup sugar
¾ cup syrup
1¼ teaspoon vanilla

Add salt to egg whites and beat with electric or rotary beater until frothy. Gradually add sugar, beating until smooth and glossy. Slowly add syrup and continue beating until frosting stands in firm peaks. Fold in vanilla. Makes enough frosting for top and sides of 2-9 inch layers.

Lucy Brubaker
Denver, Pa.

xxx

Large Chocolate Cake

3 cups brown sugar
1 cup shortening
1 cup sour milk
3 eggs
1 cup hot water
½ cup cocoa
4 cups flour
2 teaspoons soda
1 teaspoon baking powder
2 teaspoon vanilla
1 teaspoon salt.

Bake at 350 degrees for 30-40 minutes.

Lucy Brubaker
Denver, Pa.

xxx

Potato Buns

Part I:
1½ cup flour
1 yeast cake
1 cup warm water

Combine warm water and yeast. Let stand a little and add flour letting it rise 1 hour.

Part II:

Cook 1 cup diced potatoes and mash by hand. Let water with them and add ½ cup lard, ½ teaspoon salt, ½ cup sugar and 3 eggs beaten.

Add part II to part I and beat well, then add flour to stiffen dough. Knead well and let rise till double in size. Roll out and spread with margarine and sprinkle with brown sugar, cinnamon and raisins. Roll and cut.

Part III:

One cup brown sugar, 1 cup molasses, ¼ cup water. Bring to a boil then put in bottom of pan. Pat buns in and let rise for one hour. Bake at 350 degrees for 20-30 minutes.

Lucy Brubaker
Denver, Pa.

xxx

Potato Facts

Handle potatoes with care. They bruise easily. While seemingly rugged, they can be damaged all the way from the digging machine to the storage bin in your home.

xxx

Are potatoes more fattening than other foods? No. They're innocent victims. A medium-size potato contains about 90 calories, about the same amount as an apple or a banana. It has no more carbohydrate value than those two fruits. The real villians are the butter, sour cream, and gravies that make the difference.

Potatoes stored at 70 to 80 degrees should be used within a week. The higher temperature will cause sprouting and shriveling. Stored at temperatures below 40 degrees, they will develop a sweet taste as starch changes to sugar.

xxx

Potatoes are often classified by their use. "New" potatoes are best used for boiling; general purpose potatoes are available the year around and are used for boiling, frying, and baking.

Home on the Range

Freeze Now...Eat Later

The unlimited selection of beef cuts available now may suggest that it's a very good time to put your freezer to maximum use. Select the cuts to fit your family taste as well as your budget. Then freeze.

Fresh beef, pre-packaged for self-service, should not be stored in the refrigerator in the original wrapping more than 2 days. It may be frozen without rewrapping and stored in the freezer for a period of 1 to 2 weeks. For longer freezer storage, the original package should be over-wrapped with special freezer material.

If properly wrapped, beef cuts will maintain their quality for 8 to 12 months. If stored longer than a year, the beef may lose some of its quality.

Apple Pudding

6 cups apples (pared and sliced)
1 cup granulated sugar
2 tablespoons flour
salt

Mix together and put in greased large and flat pan.

Topping

½ cup oatmeal
½ cup brown sugar
One-third cup butter

Mix and spread on top sprinkle with cinnamon and bake at 350 degrees for one hour.

Lydia Petersheim
age 14
Ronks, Pa.

xxx

Pizza Sauce

30 ounces of thickened tomato juice
Two-thirds cup water
½ cup oil
2 teaspoon oregano
2 teaspoon garlic powder
1 teaspoon salt
1 teaspoon pepper
1 tablespoon brown sugar
2 to 3 tablespoons cornstarch

Cook 30 to 40 minutes.

Pizza Crust

2 cups quick bixcuit mix
½ cup (lukewarm water)
1 teaspoon yeast

Let rise for 5 minutes and spread on greased pan. Spread with pizza sauce and cheese.

Katie Petersheim
age 5
Ronks, Pa.

xxx

Union Pie

1 cup sour cream
1 cup thick milk
1 cup sugar
1 cup molasses
1 teaspoon soda
1 teaspoon cream of tarter
1 tabelspoon flour
3 eggs

Combine ingredients and bake in a pie shell. (No specific instructions included.)

Edna Oberholtzer
age 14
Richland, Pa.

xxx

Green Beans

4 tablespoons margarine or butter
4-6 tablespoons all-purpose flour
2 teaspoons salt
½ teaspoon pepper
1 medium onion
2 cups rich milk (or sour cream)
1 quart green beans
cheese

Melt butter. Add onion and fry until brown. Stir in sour cream or milk with flour. Add to onion, salt and pepper. Stir until smooth. Cook until sauce is bubbly and thickened stirring constantly. Fold in green beans and top with cheese.

Amanda Hoover
Ephrata, Pa.

xxx

Frozen Orange Cubes

1 package orange gelatin
1 package vanilla pudding

Prepare gelatin and vanilla pudding as directed on packages. Chill gelatin until partially congealed and then beat until fluffy. Add cooled pudding and beat until well blended. Pour mixture into ice cube trays and freeze. When frozen, put a toothpick in each cube and eat.

Linda Wenger
age 13
Lititz, Pa.

Fruit Cake

1½ cups white sugar
½ cup salad oil
2 eggs
2 cups flour
½ teaspoon salt
2 teaspoons soda
2 cups chopped fruit

Bake at 350 degrees for 45 minutes.

Topping

¼ pound butter
¾ cup sugar-white
½ cup evaporated milk

Boil hard for 1 minute and add nuts.

Ruth Miller
age 11
Strasburg

xxx

Jellie Roll

2 eggs
1 cup flour
1 cup white sugar
1 teaspoon baking powder
4 tablespoons cold water
½ teaspoon salt

Separate eggs, beat yolks. Add sugar slowly. Add cold water. Beat well. Sift dry ingredients gradually. Add egg whites. Bake in oven 350 degrees for 10 minutes. Turn out on damp cloth sprinkled with powdered sugar. Spread generously with any flavor jelly. Then roll.

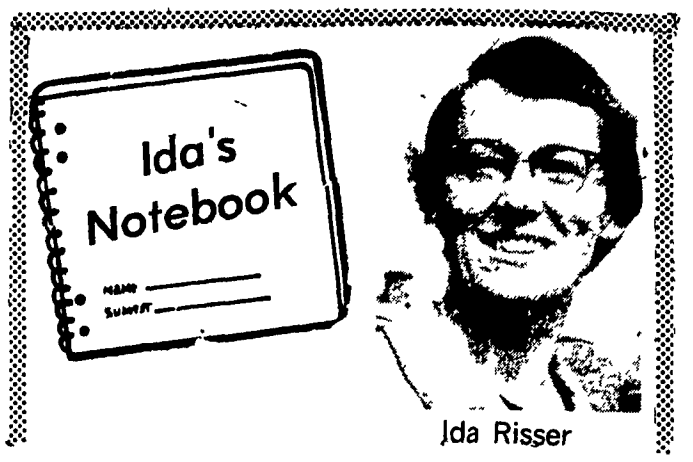
1 teaspoon salt

Preheat oven to 350 degrees and bake until done.

Annie K. Beiler
age 9
Leola

xxx

In the early days of potato development in Europe, potatoes came in about as many colors as Joseph's coat. There were also two-toned potatoes, including potatoes predominently violet or yellow with splashes of another color. Today skin color seems to have no relationship to cooking quality of a potato.



Ida Risser

Our college-age children have just spent a few short days with us. It seems that time flies when they are home and they are never able to accomplish all that they wish.

Jeff cut a shelf to fit a new vanity and another shelf for a closet, he moved some electrical fixtures, repaired his grape arbor and helped his father dig footers and pour concrete at the barn.

Judy spent her time baking bread, buying material for an Easter dress, applying for a summer job and preparing some of my old wool coats in order to hook a rug. Philip made a frame for her and found a piece of burlap she could use.

One reason that I've mentioned their activities is because I was surprised to hear them say that some of their fellow students didn't go home at all or just stayed for a day and then returned early to college. Why would they do this? It seems the answer is that home is so boring and there is nothing to do! Living on a dairy farm it is difficult for me to visualize such a situation.

xxx

My husband kept urging me to get my garden seeds as the supply might be short. Well, when I finally checked, I found the only things I needed were sweet corn and lima bean seed as there are plenty left from last year. Also, I save my own early sugar peas as these two varieties do very well for me.

My garden has a chickweed problem and the only way I can keep my strawberry rows immaculate is to spray them in the fall. The children ask if I'll have as big a garden as before. Really, I never gave it a thought.

As long as I'm able, I'll be out there planting, weeding and picking. Working in the rich dark soil getting a backache and going to bed dead tired are all a part of having those beautiful rows on canned goods and a full freezer to feed a hungry family.

Farm Women Societies

Society 3

Farm Women Society 3 entertained the members of Society 20 from Quarryville on Saturday, March 15, at a luncheon in the Salem Lutheran Church in Ephrata.

Entertainment was provided by the Bell Choir from Linden Hall under the direction of Miss Jean Yock.

Jay Smoker of Stevens R1, spoke on the work he will be doing in Swaziland, Africa with the Agape Movement sponsored by the Crusade for Christ. Jay is the son of one of the members, Mrs. Earl Smoker.

During the business session, donations were made to the Easter Seal Society and the Cerebral Palsy Fund. Contributions were also made to the Ephrata Community Hospital and the International Farm Youth Exchange program.

Members of Society 3 will be guests of Society 17 for a meeting at Chestnut Level.

The next meeting will be Sat. April 19 at the Salem Lutheran Church, Ephrata at 1:30 p.m. The program will be a slide presentation of the work at the Pinajelo Clinic in Honduras presented by Mrs. Harold Stuber.

Society 8

Farm Women's Society 8 met at the home of Mrs. Arlene Witman, Mount Joy, R2 on March 15 at 2:00 p.m. Mrs. Grace Bixler, President was in charge of the meeting. Several Easter songs were sung by the 25 members and three guests present. Mrs. Phyllis Endslow was in charge of devotions and gave Easter thoughts at this time. Mary Grace Martin read the minutes of the previous meeting and variety in Roll Call followed as the ladies mentioned the first signs of spring which they noticed in their vicinity.

The Treasurer's Report was accepted as given by Mrs. Elizabeth Shuman. The Society voted to give a donation to the piano fund for the Farm and Home Center.

Society 22 from Willow Street entertained 18 ladies from this Society, March 11. They presented a unique mock wedding, piano music and a luncheon for the enjoyment of all.

The special speaker, Mrs. Lorenzo Tucci, a retired schoolteacher from Millersville showed and described various sizes and shapes of crosses she has collected from different countries. These were made of different materials and are used as symbols for the crucifixion.

The deadline date to purchase ($6) tickets from Mrs. Elizabeth Shuman, Maytown is April 15. The Rally will be held April 30 at the Hershey Convention Center.

The attractive Easter decorations were seen in the Witman home and the refreshments were fixed to follow this theme. Hostesses Arlene Witman, Mary Sarver, Alice Myers, Georgianna Forney served at this time. The next meeting will be at the home of Mrs. Elizabeth Shuman, Maytown April 19, at 2:00 p.m.

Society 12

Farm Women Society 12 met for their monthly meeting on March 15 at the home of Mrs. Ruth Brinton.

Miss Ethel Kindig president, conducted the business meeting with Mrs. Fannie Witmer giving the devotions.

Twenty members and two visitors answered roll call by telling their first job away from home.

Mrs. Elvin Harnish showed slides of jewelry which she makes and sells.

The next meeting will be at the home of Mrs. Fannie Witmer Conestoga R2.

Society 18

Society of Farm Women 18 met March 15 at the home of Mrs. Lester H. Kreider, 169 Buch Avenue, Lancaster.

Devotions were led by Mrs. Tobias Leaman and roll call was answered by each member telling of an Energy Saver.

The society will sew at Lancaster General Hospital, March 25, from 9:00 to 2:00 p.m.

Each one who wishes to attend the Spring Rally at Hershey, April 30, signed her name.

The society will be entertained by Society 1, Saturday, April 5 at Farm and Home Center at 12:30 p.m.

The program featured a most interesting talk on "The Art of Quilling" by Mrs. Paul Metzler.

Plans are being made to entertain member's husbands at a banquet on April 19 at 6:30 at Good 'N Plenty Restaurant.

Society 22

Society of Farm Women 22 had as their guests, 18 members of Society 8 and the county officers at a luncheon at the Willow Street United Church of Christ in Willow Street recently.

Hostesses were Mrs. Kenneth Hoover, chairlady; Mrs. Willie Zodet, Mrs. Ralph Martin and Mrs. Harold Zook.

Mrs. Kenneth Hoover gave a reading on St. Patrick's Day theme.

Mrs. Henry Hess, president, conducted the business meeting in which the Society decided to send a gift to the Easter Seals Society. A report was given by Mrs. Henry Balmer on the group's food stand. Mrs. Clair Witmer reported on the Society's adopted daughter. As entertainment a mock wedding was held with Mrs. Edwin Sangrey and Mrs. Henry Balmer participating.

Mr. Harry Canter, a teacher at Millersville, played the piano for group singing.

The next meeting will be held April 8 at 1:00 p.m. at the home of Mrs. Jacob Houser, Jr. Lampeter. Mrs. Ida Risser will be the guest speaker.

Pennsylvania Power & Light Company's manager of rates and market research, Andy Baldwin, answers another question from the utility's consumers.

QUESTION

Will you seek a rate increase soon?

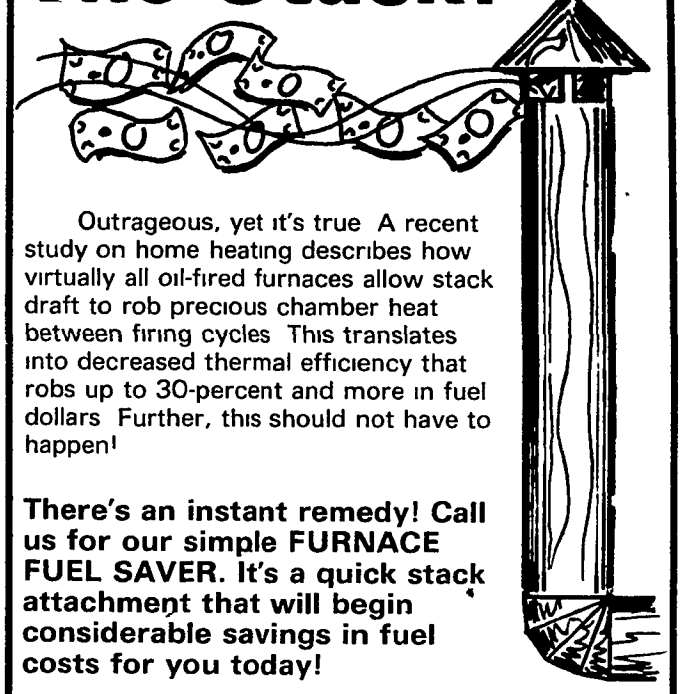
ANSWER

We will be applying for a rate increase in a very short time. The need for any increase is certain to be questioned by our customers since our performance during the 1960s indicated that we were able to offset rising costs through improved performance. Today, however, costs for everything are increasing faster than we are able to offset them. We are not granted rate increases by the Pennsylvania Public Utility Commission just because we think we need one. It is necessary for us to establish the need, based on our costs over a prior one-year period. In effect, our rates are based on outdated costs. These costs are scrutinized very closely by the commission and a permanent rate increase is granted only after a series of public hearings and after determining it's necessary to insure that you, our customer, continue to get reliable electric service.

PP&L

According to government studies:

All Home Oil Furnaces Waste 30% Fuel Up The Stack!



Outrageous, yet it's true A recent study on home heating describes how virtually all oil-fired furnaces allow stack draft to rob precious chamber heat between firing cycles This translates into decreased thermal efficiency that robs up to 30-percent and more in fuel dollars Further, this should not have to happen!

There's an instant remedy! Call us for our simple FURNACE FUEL SAVER. It's a quick stack attachment that will begin considerable savings in fuel costs for you today!

For complete information call

Society 23

Farm Women Society 23 met recently at Shady Lawn Rest Home, Columbia Avenue to entertain the guests. Devotions were conducted by Mrs. Barbara Nissley. The program which was in charge by Mrs. Howard Martin, included group singing of some "oldies" with Mrs. Leory Funk at the piano. There were several humorous readings by Mrs. Clayton Charles. After visiting with the 22 guests and distributing fruits trays to each, we went to the home of Mrs. Ed Funk for the business meeting. Mrs. Charles Frey presided in the absence of the Pres. Mrs. Jay Charles who is ill. The county projects were discussed and voted on. The date of June 7 has been set for the Family Picnic at the Washington Boro Park.

The April meeting will be held at the home of Mrs. John Thomas Jr., Millersville.

Dauphin Co. Society 1

Farm Women Society 1 of Dauphin County met on March 11 at the home of Ruby Kingsboro. Sarah Long and Velda Lerphey were co-hostesses. Devotions were led by Ruby Kingsboro.

Roll call was taken with 19 members answering with their favorite home product.

Plans were made for the upcoming Spring Rally to be held on April 30 in Hershey.

Ruth Rife made a suggestion to make lap blankets for the patients at the Odd Fellows Home in Middletown. She made a blanket and brought it to the meeting. The members decided to take this on as a project.

A note from the Odd Fellows Home was read by the president Ruth Oberholtzer. They thanked the Society for entertaining the patients.

Plans were made for the May 13 meeting to entertain Society 10.

The program for the evening was a demonstration of home products given by Ruby Kingsboro. The next meeting will be held at the home of Della Parmer, Tuesday, April 8 at 7:30 p.m.

Dairy Goat Seminar

A seminar on dairy goats will be held at the Amyr Farm, home of Dr. and Mrs. Richard Stoneback, Oxford, Pa. on Sunday, April 20.

There will be a discussion program aimed at the newcomers in the goat industry. On hand will be experienced dairy goat breeders to answer any questions. A demonstration on the characteristics of goats will be given alon with a 4-H judging contest

After the seminar, covered dish supper will b served. There will be a $ charge for adults. For fur ther information pleas contact Mrs. Margare Csala, secretary of the Del Mar-Pen Dairy Goat Club Box 88, RD2, Rising Sun, Md 21911 Phone 301-658-4175.

March Goes Out with Lamb

Passover and Easter come early this year and for traditionalists this means that March will go out with lamb on the table. Lamb, of course, is customary fare for Easter dinner and for Passover Seder meals.

In addition to being traditional and versatile, lamb is a good source of vitamins B-1 and B-2, iron and niacin. And, most cuts of lamb are naturally tender because they come from sheep under one year old.

When buying lamb look for the U.S. Department of Agriculture (USDA) grade shield. This is a reliable guide to eating characteristics — tenderness, juiciness and flavor.

There are three USDA quality grades that the consumer may find in a retail stoe: Prime, Choice and Good.

USDA's Agricultural Marketing Service (AMS) says the grade you are most likely to see in stores is USDA Choice. This is a very high quality meat, and will be tender, juicy and flavorful. Choice lamb chops and roasts are suitable for dry heat cooking. Prime grade lamb is the highest quality but is not carried widely at retail level. It has generous marbling–flecks of fat within the lean–which contribute to the flavor and juiciness. Prime chops and roasts are excellent for broiling and roasting.

In addition to quality grade, AMS meat grading specialists advise consumers also to pay attention to the cut of the meat. Regardless of quality, some cuts of lamb are naturally more tender than others. Cuts from the less-used muscles along the back of the animal–the rib and loin sections--will always be more tender than those from the active muscles such as the shoulder, flank, and leg.

The most tender cuts make up only a small proportion of the lamb carcass–and they are in greatest demand. Therefore, they demand higher price than other cuts.

Consistently tender lamb cuts include the sirloin chop or steak, the loin chop, loin roast, rib chop and rib roast. You will find that most cuts of USDA Prime and Choice lamb--including shoulder cuts–are tender and can be oven roasted, broiled, or pan-broiled. A leg of lamb graded Choice or Prime, for example, is a delicate delight when oven roasted.

The less tender cuts–the breast, riblets, neck, and shanks–are sometimes more economical--and can be braised slowly to make excellent (and tender) lamb dishes.

If you would like to know more about lamb grades and cuts write for the U.S. Department of Agriculture's booklet "How To Buy Lamb" (G-195). Copies are available for 25 cents from Superintendent of Documents, Government Printing Office, Washington, D.C. 20402. Please include your zip code in your return address.

Launder Pillows Carefully

Among the special laundry problems homemakers face, one of the easiest.to postpone is laundering pillows. Using washable zippered pillow covers is the best way to avoid the chore for a while, but eventually bed pillows will need to be freshened with a thorough washing.

Almost all bed pillows manufactured today can be machine washed and dried, according to Coral Morris, extension home management specialist at the University of Delaware. This includes luxurious pillows of 100 percent down, as well as those filled with a combination of down and feathers. Polyester-filled pillows and those of foam are also easily laundered.

Down continues to be the most expensive filling, long favored for its softness, lightness and resiliency. Also available are various combinations of down and feathers. The greater the percentage of feathers, the firmer and less soft the pillow will be. Ms. Morris says there is also a difference in the kind of feathers used for pillows. Those from waterfowl, such as geese and ducks, are lighter and softer than feathers from land birds such as chickens and turkeys. In addition, turkey and chicken feathers must be artificially curled, and may flatten after a time.

Polyester fiberfill pillows are popular with those who like a firmer support for the head. These pillows are buoyant, odorless, mothproff, mildew-proof, and hypo-allergenic. Latex foam pillows offer similar features, and are also bouncier and dust-free. Pillows of molded foam will keep their shape better than those of shredded foam, Ms. Morris cautions.

Before washing down or feather pillows, check to be sure that none of the seams are ripped. You don't want feathers filling up your washing machine! Even a tiny break in a seam can allow small feathers to escape.

The home management specialist recommends following these directions from the Soap and Detergent Association when laundering pillows. Wash them two at a time to balance the load in the machine. Fill the washer half full of warm water, then stop the machine and push the pillows under the water several times so that they will become soaked. Finally, start the washer again and let it fill while you add soap or detergent. Wash the pillows for about 10 minutes, allowing the machine to complete its full cycle.

Feather and down pillows can be dried in the automatic dryer using the highest heat for the longest period of one cycle. You may have to add even more drying time to get them completely dry throughout. Polyester fiberfill pillows can also be machine-dried with a heat setting. However, latex foam pillows should never be dried with heat, Ms. Morris cautions. They may be machine-washed, but should only be machine-dried on an air setting if necessary to dry indoors.

Because there are so many kinds of pillows on the market today, Ms. Morris advises consumers to read the labels before making a selection. According to federal law, the filling content must be stated, and care instructions must be given.

'74 Pa. Apple Crop Posts Slight Decrease

York Imperial, the Commonwealth's leading apple variety, was down 19 percent from last year. York production, estimated at 112.8 million pounds, including unharvested production, accounted for 24 percent of the total state apple crop, according to a report released last week by the Pennsylvania Crop Reporting Service.

Pennsylvania retained first place this season in the production of York Imperials, accounting for over 43 percent of the U.S. total. Virginia with 79.2 million pounds ranked second, accounting for over 30 percent of the total U.S. crop of York Imperials. Pennsylvania ranks fourth in the nation in total apple production. The 1974 crop at 470 million pounds was down slightly from the 1973 crop of 500 million pounds, but still well above 1972's 400 million pounds.

Golden Delicious remains the second largest producing variety in the state, accounting for over 17 percent of the 1974 crop or 80.4 million pounds. Red Delicious with a production of 77.6 million pounds was the third largest producing variety, accounting for over 16 percent of the total. The fourth largest producing variety was Stayman, accounting for over 15 percent of the total or 70.6 million pounds. The percent of total production by other leading varieties are: Rome Beauty 12 percent, Jonathan 4 percent, and McIntosh 3 percent.

Nationwide, the 1974 commercial apple crop at 6.4 billion pounds was 2 percent more than 1973 and 9 percent above the 1972 crop. This production was the largest utilized crop since the 6.7 billion pound crop of 1969. Higher production in the Eastern and Central States in 1974 offset lower output in the West.

Winter Pears Abundant

The pear you eat today is very likely to be an Anjou, the winter pear that makes up more than 90 percent of the winter crop. Marketing specialists of the U.S. Department of Agriculture say the supply of Anjous is big - and good.

It is pale green in color, somewhat heart-shaped with a short stem, and hard and firm to the touch. Its eating perfection is the result of careful nurturing and gentle handling. Very likely it has travelled several hundred miles to your table.

Anjous are grown at the base of the mountains in Oregon, Washington, and California. The fertile, volcanic ash deposits, warm sunshine, and cool breezes of the Pacific Ocean provide ideal growing conditions.

A special tester was developed to determine the right moment for pears to be picked from the trees. Like bananas, pears are not tree ripened. The tester will determine when the pear has reached a point at which it will develop maximum sweetness when ripened.

When the pears are picked, they are placed in canvas packing bags, then into field boxes, and taken to packing houses. Pears are handled with extreme care and gentleness to avoid bruising at each step of the way.

At the packing house they are washed, graded, wrapped separately, and fitted snugly into the shipping boxes to avoid jostling and subsequent bruising on the journey to cold storage. They are held in storage at a temperature of about 30 degrees to inhibit any further ripening while in storage. Special precautions against ripening are taken enroute to market.

When you find them at your grocer's, you are likely to find them firm, hard, and pale green. But color is no indication of ripeness. They are ripe only when they yield to slight thumb pressure. This process may take from 2 to 7 days. They are then at their finest. To avoid further ripening, they should be refrigerated.

They're a cool, delicious treat for winter eating.

DEADLY GAME

Things are tough all over these days The guy down the street just took out a million dollar life insurance policy Only problem was he died anyway

ENERGY

Our earth continuously receives 167,000 times more energy from the sun than is presently used by all the nations of the world

York County Council Meets

Lockin, Family Night, (March 8), Officer Training (February 28) and Teen Agent reports were past tense business at the York County 4-H Council. Also more was covered on the Senior Dance (April 5).

York County 4-H was not able to get Massachusetts for the Senior Exchange Program, instead 4-Her's might go to Illinois.

May 11 is the Olde York Street Fair. The 4-H was asked and decided to do a "display".

A church in York County has asked the 4-H to have it's Petting Zoo June 29. It was tabled for the next meeting.

"Slides From China", by Mr. Hamburg, were enjoyed by all for the program.

Next County Council meeting is April 2 at the 4-H center. The program will be a movie.

ORGANIC LIVING

By

Robert Rodale

We Can Learn From Third-World Technology

At one time, professors from prestigious agricultural schools around the country talked about subsistence farmers as though they were second-class citizens. Small farmers hacking a living from small plots were considered inefficient food producers. Some thought subsistence farmers were actually destructive to their environment.

Times have changed, however. Now, the subsistence farmer is looked on as being much more efficient than previously believed. He is receiving deserved recognition, if not in the United States, at least in some parts of Africa.

Statistics released recently by the United Nations Food and Agricultural Organization show that Africa is losing the war to produce the amount of cereal grains it needs to avert starvation. In 1960, it produced 32 million tons, while needing 34 million. In 1973, the gap widened to seven million tons. African nations only produced 38 million tons, but needed 45 million.

As recently as five years ago, agriculturalists would have studied the situation and probably recommended that capital-poor nations invest in expensive machinery to cultivate mile after mile of their country to meet the growing production needs.

Instead, agricultural ministers have begun turning to the subsistence farmers in an attempt to close the gap between production levels and starvation. For example, one subsistence farming technique that will be retained is "Multicropping," says Dr. Bede N. Okigbo, director of farming systems for the International Institute of

Agriculture in Ibadan, Nigeria. When large fields are planted with just one crop, plants are susceptible to attack by insects and disease. Large-scale American farmers can get away with that, however, by relying on expensive pesticides and fungicides. But sophisticated technology isn't always the answer, as the Africans have discovered.

Subsistence farmers and peasants make much more efficient use of energy, compared to American agriculture. In fact, figures show modern agriculture to be one of the biggest consumers to gasoline today. The small farmer has also developed and refined food storage techniques that have been lost to their big American counterparts.

Today, writes Cornell University's David Pimentel, the U.S. loses about one-third of its crops during production. In less developed countries, the losses are about the same.

When shortages hit, America may become a nation of subsistence farmers. But instead of calling them farmers, they'll be known by the same name as they are known today: gardeners.

Gardeners may play an important role in the future survival of life as we know it. Through the efforts of hundreds of thousands of small-scale, backyard gardeners, America may be able to keep the gap between self-sufficiency and hunger closed.

Furthermore, the chances are good that as more people garden, the level of public health will rise. I've said before that gardening is a healthy hobby and occupation for many reasons. You get exercise, and a sense of well-being. And more important, you improve the quality of your food.

Consider what some researchers have been saying about the food many Americans eat. It's over-refined, high in calories, salt and fat, and lacking in nutrition, and some scientists even say what we eat actually causes disease. Our food supply, in many respects, suffers from the same over-emphasis on technology that afflicts agriculture.

Even medicine has come under attack for being too hung up on technology. In a recent commentary in the "Journal of the American Medical Association," Dr. Mehdi Tavassoli of the Scripps Clinic and Research Foundation charged that modern medicine is irrelevant.

He says that medicine is too "consumed with the irrelevant oddities of medical science" to meet the responsibility of maintaining medical health. Dr. Tavassoli says that medicine should get back to the basics of medical health care if it expects to play a significant role in the poor as well as rich countries.

Sometimes old beliefs die hard. And maybe they shouldn't die at all. Africa has learned lessons from the subsistence farmer. The medical profession is being asked to return to the basics. We're going to have to get back to the basics ourselves before too long.

And the sooner we get started, the better.

(Editor's Note: The opinions appearing in "Organic Living" are those of its author, Robert Rodale, an independent columnist. Rodale's comments do not necessarily reflect the thinking of the Lancaster Farming editor or anyone else on the Lancaster Farming staff.)

AGWAY

21-second cooling keeps your milk as fresh as it came from the cow.

The Feldmeier Multi-tube Heat Exchanger cools milk before it enters the storage tank. It eliminates mixing warm and cold milk, which can impair milk quality. The system also eliminates constant agitation during the milking period, which can lead to rancidity and flaky milk if the period is too long.

Seven stainless-steel milk tubes surrounded by a cold water jacket cool your milk, from 98° to 34° in just 21 seconds. The heat exchanger ties into your pipeline and is easily cleaned in place.

For details on the most modern milk-cooling system, talk to your Agway man and ask for a call by an Agway Farm Systems Salesman

Manheim FFA Holds Parent-Member Banquet

The presentation of degrees along with the awarding of both citation and achievement awards highlighted the Annual Manheim FFA Parent-Member Banquet held on Friday evening, March 14 in the Manheim Central High School cafeteria.

Robert Hershey, president of the chapter, served as emcee for the program and presented the welcoming address. The invocation for the dinner was given by Steve Hershey.

Ruby Ginder, secretary of the Chapter, introduced the guests at the meeting.

Honorary Chapter Farmer certificates were presented to David McKalips, superintendent of the Manheim School District; Earl Landis an area dairy farmer and Walter Heistand, a cattle dealer.

The 1975 Citation Awards were presented to Hat and Gavel Auction, Philips Ford in Manheim and Hoffman Fertilizer Company.

Jerry Schaffer, PP&L Farm Representative, presented Robert Hershey and Kevin Rohrer with their Keystone Farming Degrees.

Also recognized were those youths who had been involved in the County Judging Contest, Record Book Contest, the Citrus Sales and the Honor Roll Program.

Joseph LeFever and Dale Nolt were awarded special citations for having been selected as American Farmers in the FFA program. Jess Erway, agriculture instructor, presented the awards.

Entertainment for the evening was provided by Glenn Eshleman, a noted area photographer, who presented his slide program "America the Beautiful."

FFA members who received honors at the Manheim FFA Banquet held on March 14 included (from left) Edward Manning - Star Greenhand and Dave Keller - Star Chapter Farmer.

Clean Streams Law is Topic Of Farm Meet

Pennsylvania's clean streams law and its effect on farmers will be the topic of the Adult Farmer Meeting to be held at the Hinkletown Alternative School on Wednesday evening, March 26, at 7:30 p.m.

Speakers for the evening will include Afton Schadel, chief of the Soil Resources and Erosion Control Department of the State Conservation Commission, Henry Hackman, executive director, and Aaron Stauffer, chairman of the Lancaster County Conservation District, and Scott Eberly, soil conservation technician with the Lancaster County Soil Conservation Service.

Schadel will discuss the law as it is now written, what is required of the farmer, and how the law will be enforced. Stauffer and Hackman will provide information on how the conservation district can assist the farmer in meeting the requirements of the law. Eberly will provide information on the assistance available from the S.C.S. on conservation practice planning and application.

The Hinkletown Alternative School is located one-half mile North of Route 322 on Wanner Road just East of Hinkletown. All interested persons are invited to attend.

Livestock Require Space

Livestock have space requirements defined by "bubble-like" shapes surrounding the head. When one animal moves into the "bubble" of another, the offended animal will either take aggressive action, move away, or go into a submissive posture or behavior.

This behavior was reported March 4 during Livestock Day at The Pennsylvania State University. Ray Stricklin, graduate assistant in animal science at Penn State, indicated that beef cattle requiring the greatest space or largest "bubble" were those intermediate between dominant and submissive.

The "bubble" is related to "peck order" or dominance order within animals which has been known for years, he added. Once established, this dominance rank allows animals to exist in penned areas while sharing the same watering and feeding facilities with a minimum of fighting.

Findings by Stricklin and associates were published in the annual "Animal Science Research Summary," published in connection with Livestock Day.

Temperament of animals is also related to production. Hereford steers were observed while they were restrained in a head gate. The steers that tried hardest to get out of the chute did not gain as fast as other steers and required longer feeding periods to reach market grade. The more docile animals tended to gain more rapidly, reached slaughter weight and grade sooner, and were the more dominant steers in the group.

The studies examined the dominance order among Hereford calves and crossbred calves from Charolais-Angus cows and Charolais bulls. Older, larger steers were the more dominant ones. They had priority at feeding and watering facilities. They spent more time lying down and less time standing and walking.

Avoid adding "new" animals to established groups of feedlot cattle, Stricklin suggested. This helps to prevent injuries and avoids loss of energy in fighting. Grouping animals by size when they go into feedlots also appears to help in preventing injuries, he added. When animals must be mixed, it may be best to do so at night when darkness helps to keep fighting at a low level.

The steers and beef calves were observed daily from 11 a.m. to 4 p.m Each animal was studied for dominance relationships to each other animal in the pen - fighting, butting, or heat thrusts, and avoidance. Directing the research were Dr. Lowell L. Wilson, professor of animal science, and Dr. Hannon B. Graves, associate professor of poultry science.

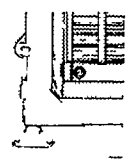
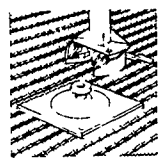
For insurance or tax purposes it is a good idea to have an inventory of the contents of your home. The list should indicate the year each item was purchased and the price, but even if it isn't so detailed, it will serve as a reminder if any belongings should be lost in a burglary, fire, flood, or other casualty. Photographs of each room and its contents can supplement the written inventory. Keep these records in a safe place outside the home.

BIG TRUCK HAULING WITH YOUR PICKUP AND THE...

WINNEBAGO® Agri-Trailer™



Two-speed landing gear provides easy hitching.



Easy hook-up with wide-opening jaws of Pin & Plate.

Hitch this versatile trailer to your truck for road travel, switch it to your tractor for field loading. The Winnebago Agri-Trailer can carry as much as a 3-ton truck. It can haul over 7½ tons. Or 285 bushels of grain. Winnebago's 5th wheel design gives unique stability. It turns short, backs up easy, and trails true at highway speeds without fishtailing.

Awards Presented At Elco FFA Banquet

Achievement awards along with the presenting of FFA degrees highlighted the 13th annual Elco Future Farmers of America (Lebanon County) banquet held at the Elco Middle School on Thursday evening, March 13.

Dean Heisey, president of the Elco FFA chapter, acted as toastmaster to the 200 persons in attendance.

David Adams, advisor to the Elco group, presented awards to freshmen Renee Igram, Mel Hoover, Dwayne Kieffer, Francis Stamm and Dave Wenger; sophomores Brian Hunsicker, Bill Bennetch, Bob Martin, Stacey Woods and Kirby Horst; juniors Darryl Kurtz, Marlin Heisey, Jerry Hartranft and Gerald Hogeland; and seniors Michael Bender, Dan Ober, Sue Swisher, Ken Ritchie, Carl Lutz, Tom Ulrich, Gene Sholly, Scott Sweigart, Carl Weaver and Dean Heisey.

The Star Chapter Farmer award was presented to Dean Heisey, while the Star Greenhand, presented to the outstanding freshman in vocational agriculture, was awarded to David Wenger.

Recipients of the honorary membership in the Elco FFA were Ron Bower, the Young Farmer instructor; Esther Papson, head of the Language Arts department; and Gloria Eckert, secretary to the superintendent. These awards are given to those citizens who lend assistance and help to advance the work of the FFA. Also receiving special awards of appreciation were Mr. and Mrs. Irwin Sweigart, Mr. and Mrs. Paul Heisey and John Weaver.

Elco boys receiving special recognition were Kirby Horst, corn production; Darryl Kurtz, Swine production; Jerry Hartranft, poultry proficiency; Gerald Hogeland, crop production; Carl Weaver, dairy proficiency and DeKalb award; and Dean Heisey, public speaking.

The county project book awards were presented by Larry Wenger, an FFA alumni. Winners were Gerald Hogeland, Ken Ritchie, Robert Martin, Kirby Horst, Irwin Daub, Scott Sweigart, Wayne Bucher, Jerry Hartranft, Brian Hunsicker, Darryl Kurtz, Donald Harnish and Gene Sholly.

The Elco FFA Alumni Association made a special presentation to Ronald Bowers, the Young Farmers Instructor, for his help and assistance during the year. The alumni association also presented monetary awards to Kirby Horst and Stacey Woods.

The Keystone Farmer Degrees were conferred upon Dean Heisey and Carl Weaver. They were presented by Harvey A. Smith, Area Vocational Consultant.

One of the highlights of the evening was the presentation of a resolution and plaque from the Pennsylvania State Legislature and presented by the Sen. Clarence F. Manbeck to John Moyer, Newmanstown RD1, for attaining the distinction of being named North Atlantic Regional Star Farmer.

State FFA officers attending and speaking to the group were Terry Murray, secretary of the Pennsylvania FFA Assn. and Glenn Ulrich, Eastern Regional Vice President of Pennsylvania FFA Assn. Special guests also attended from the Annville-Cleona, Cedar Crest and Northern Lebanon FFA chapters.

Music during the dinner was presented by members of the Elco band under the direction of Robert Shultz.

Receiving officer pins for 1974-75 were Dean Heisey, president; Carl Weaver, vice president; Sue Swisher, secretary; Dan Ober, treasurer; Scott Sweigart, reporter; Mike Bender, sentinel; and Robert Martin, chaplain. David Adams is the chapter advisor.

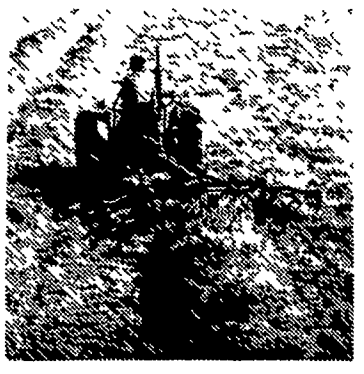
LELY GEMINI Hay-Saver

"LIKE AN EXTRA DAY OF SUNSHINE'



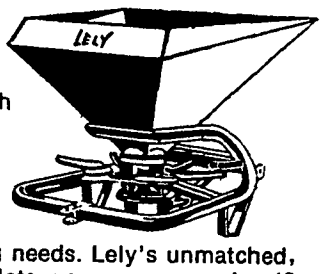
Sun is the greatest for drying hay, but only when its shining.

When rains and wet weather hit, you need the remarkable Gemini Hay-Saver to gently spread your wet crop over a wide area to prevent deterioration and speed drying

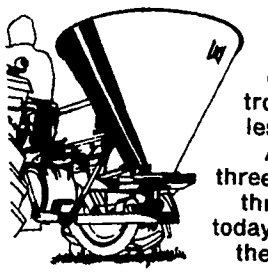
Then when the hay is dry, you simply flip the Gemini Hay-Saver's windrowing cage down and it makes the lightest, fluffiest windrow in the business Behind a Gemini Hay-Saver, you bale 25% faster

This year, count on sunshine to make a top hay crop--and the Gemini Hay-Saver to save it.

LELY BROADCASTER SEEDERS



You must see the Lely Broadcaster/Seeder to appreciate its real worth With six different sizes to choose from —all with Lely's exclusive patented feedring—There's a size to fit your cropping needs. Lely's unmatched, dependable accuracy lets you cover up to 40 acres an hour . 5 to 1,500 lbs. per acre . . . due to its 52' spreading width. Proper placement and distribution of costly fertilizer and seed is assured. The Lely Broadcaster/Seeder adapts for rear, side or 2 and 4 row delivery. It's broadcasting versatility ranges from fertilizer to seed to granular chemicals to sand to salt. It's unique patented system has eliminated many moving, troublesome parts. Assures less trouble and downtime. And its easy to clean . . . three simple steps and you're through. Come in or call us today for more information on these proven money-savers.



FFA Winners Announced

The 1975 Lancaster Co. FFA Parliamentary Procedure and Public Speaking Contests were held at the Garden Spot High School on March 12.

The first place Parliamentary Procedure team was Solanco Chapter from Quarryville. Members of the team were: Tom Jackson - President, Tim Smeltz - Vice Pres., Lee Landis - Secretary, Ken Tucker - Treasurer, Merle Ressler - Reporter, Bruce Kreider - Sentinel, Dewey Atkins - Chaplin, Gorden Herr - Student Advisor. The team was coached by Dr. William Fredd.

Second place team was Cloister Chapter from Ephrata. Members of the team were: Kerry Boyd - President, Daryl Martin - Vice Pres., Curtis Martin - Secretary, John Wieler - Treasurer, Dennis Martin - Reporter, Steve Strauss - Sentinel, Cliff Martin - Chaplin, Gary Eberly - Student Advisor. The team was coached by Mr. Ernie Orr.

Third place team was Grassland Chapter of New Holland. Team members were: Dean Weiler, Richard Martin, Nelson Eberly, Darrell Nolt, Rick Groff, Linford Weaver, Alvin Wise, Lynn Stoltzfus. Coach was Mr. Clifford J. Day.

Fourth place team was Grassland Environmental of New Holland. Team members were: Al Kirchoff, Ed Carvell, Sue Sollenberger, Gary Patterson, Shelly Dissinger, Steve Musser, Chuck Leakey, Steve Sauder. Coach was Miss Cheryl Rousseau.

Judges for the contest were: Representative Marvin Miller Jr. of Lancaster, Jerry B. Shaffer of Manheim - PP & L Representative and Nevin Mast of Morgantown - 1973-74 FFA State Officer.

The Winners in the Senior Division of the Public Speaking Contest were: First place - Ann Martin of Grassland Environmental, title of her speech - Is There a Future in Beef?

Second place went to Jeff Rutt of Solanco, title - Production for a Profit.

Third place was Delores Nolt of Grassland Environmental, title - Two Unimportant Words.

Fourth place was Demas Moyer of E-town, title - World Wide Famine.

Fifth place went to Randy Ranck of Solanco, title - World Hunger.

Other contestants were: Phyllis Martin - Cloister, Dwight Eshelman - Lampeter, Steve Hershey - Manheim, Ruby Ginder - Manheim and Gordon Lewis - E-town.

Judges for the Senior Contest were: Mr. Jay Irwin - assistant Lancaster Co. agent and Mr. Stan Dean of Garden Spot English Dept.

Winners in the Junior Division of the Public Speaking Contest were: First place was Mike Martin - Pequea Valley, Title of his speech was Preparing Dairy Cattle for a Show.

Second place was Jay Gainer - Manheim, title How Long?

Third place went to Melody Huber of Grassland Environmental, title Conservation of Widllife.

Other contestants: Charles Greff - Lampeter-Strasburg, Marty Hoover - Ephrata, Arthur Mellinger - Lampeter-Strasburg, Rochelle Sager - E-town, Daryl Bowman - Pequea Valley.

Judges for this contest were Mr. Alan Tate of Victor F. Weaver Poultry and Mr. Robert Weaver, Assistant Principal of Garden Spot High School.

Trophies, plaques and ribbons were presented at the close of the contests. The top three Parliamentary Procedure teams and the top three speakers of the Senior Division will compete in the area contest.

Arnold Exhibits Champions

Leon Arnold, a Lebanon County hog farmer, recently exhibited several award winning Yorkshires at the New York State Yorkshire Club's annual spring sale in Caledonia.

Arnold was the only guest consigner from Pennsylvania and exhibited the Grand champion bred gilt, reserve grand champion open gilt and the reserve champion boar.

James Ursel of Medina, New York, purchased Arnold's champion gilt for $490. He also purchased Arnold's third place bred gilt for $510 which recorded as the high selling animal of the entire sale.

Charles Sinclair of Pavilion, New York, purchased the reserve champion open gilt for $370 while Arnold's reserve champion boar returned to Lebanon County having been purchased by Hou-Vale Farms in Lebanon.

The annual event which included both a show and sale drew a large crowd of buyers.

Ever wonder how the word "spud" as applied to potatoes came into use? It probably came from the Scottish word, spud, meaning a kind of spade or digging fork commonly used in cultivating and harvesting potatoes. "Spuddy" is a slang term used in England for a man who sells bad potatoes.

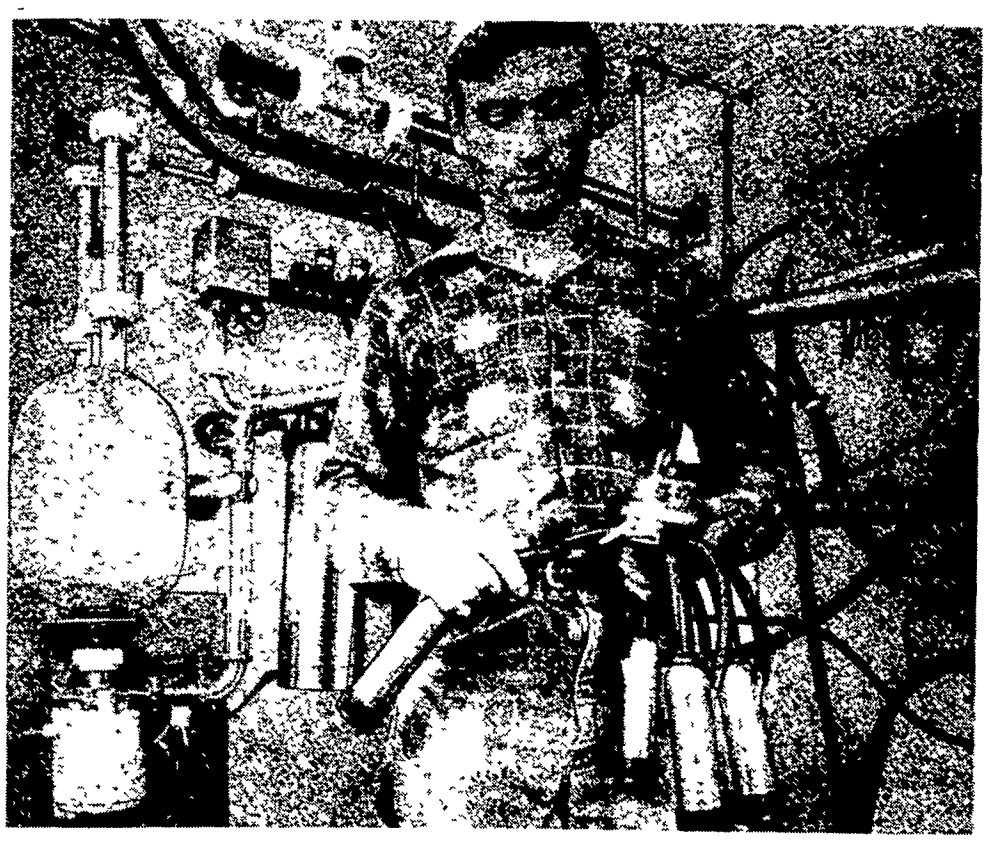
DE LAVAL The DeLaval Compact Combine can keep you in dairying.

The DeLaval Compact Combine gives you all the labor-saving, time-saving, better-milking of a full pipeline at half the cost. Or about the same cost as a bucket and transfer system. With a Compact Combine, there are no more buckets to lug and no more buckets to scrub.



The DeLaval Compact Combine was designed and built by DeLaval to meet the needs and the pocketbooks of dairymen milking up to 50 cows. See your DeLaval Dealer about our "Compact" today. It costs about half what you'd expect to pay for a pipeline.

For better daily gains at lower costs

Feed Bovotone 21

Higher feed costs and unstable market prices make it more important than ever for cattlemen to keep the cost of gain down. One sure way is to feed your own alfalfa haylage and Bovotone 21 from Vigortone.

Bovotone 21, in addition to delivering proper levels of important major minerals, trace elements and vitamins, contains abundant phosphorus to balance off the high calcium content of legume roughages.

Seldom will you need to feed any supplemental protein with a corn, haylage and Bovotone 21 program. Your cattle will do better, and your out-of-pocket costs will be cut dramatically.

Bovotone 110 and 111

Vigortone has two new pre-mixes for feedlot cattle, Bovotone 110 and 111. Both contain high levels of major minerals, trace elements and vitamins as well as non-protein nitrogen (NPN). They are particularly suited for grain and grain silage rations needing supplemental protein.

Bovotone 111 also contains MGA*, which produces a quieter bunch of heifers and promotes better daily gains.

See your Vigortone Serviceman now

If you're concerned about feeding costs, too, give your Vigortone serviceman a call. He has many up-to-date feeding programs that will help you save money.

You'll soon see why more cattlemen are feeding Vigortone — especially now.

* Registered trade mark of the Upjohn Company for melengestrol acetate

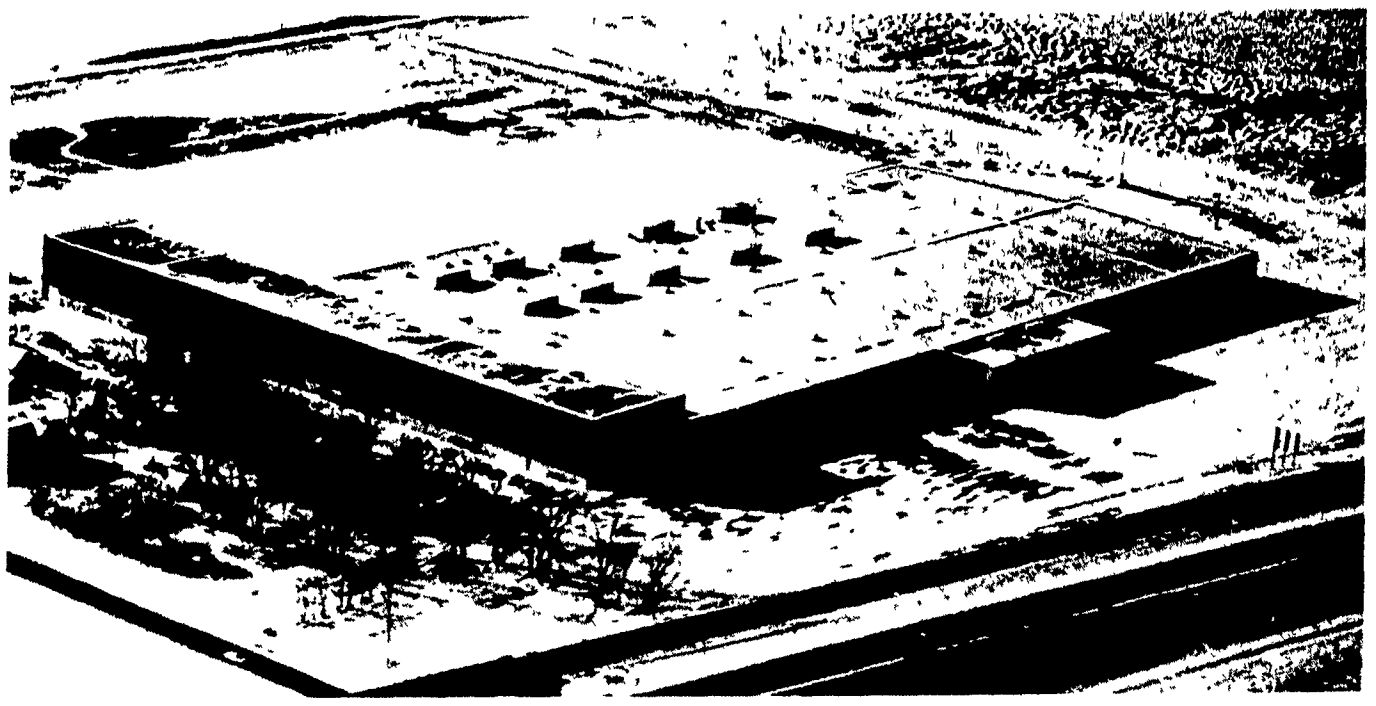
Hog Trading Up At MidAmerica

Growing investor interest the 15,000-pound live hog ntract helped boost ading volume at Chicago's id America Commodity change to 458,887 conacts during the first two onths of 1975, according to Robert Collins, exchange esident. Estimated dollar lume totaled $2.1 billion, increase of 16.6 percent er the same period in 1974. New volume records were tablished in live hog tures trading on four parate days, culminating February 28, where 902 ntracts changed hands. otal number of live hog ntracts traded during February reached 10,423, a new high for this contract, which was listed for trading June 3, 1974.

Total volume of all future contracts traded at Mid America during February, 1975 equaled 159,382, down one percent from a year ago. Noting that February was the first month in the past twelve in which volume gains had not been posted, Collins attributed the slight decline to lack of speculative interest in the recent, bearish grain markets.

MUDDY ROAD

One Chinese road sign, when translated, reads "Go soothingly on the greasy mud, for therein lurks the skid demon"



New Harvestore plant near De Kalb, Ill., shown in this aerial view, will be in production by May, 1975, according to officials of A. O. Smith Harvestore Products, Inc., Arlington Heights, Ill. The facility, 388,000 sq. ft. in area, will double the company's production capacity for Harvestore feed storage systems.

New Harvestore Plant Being Built

A new 388,000 sq. ft. manufacturing plant being built in DeKalb by A. O. Smith Harvestore Products, Inc., is nearing completion and will be in full production by May 1975, according to J. H. Brinker, Harvestore president.

The plant, which has been under construction since 1973, will double Harvestore's production of oxygen-limiting feed storage units. Previously, the Harvestore units were manufactured in A. O. Smith's Kankakee, IL, plant.

The new plant will help satisfy the steadily increasing demand for Harvestore products, Brinker said. There are now nearly 50,000 Harvestore Systems in operation throughout the world.

The Harvestore facility will initially employ approximately 250 workers in the DeKalb area, Brinker said. He pointed out that Harvestore's plants at Elkhorn, Wis., and Eureka, Ill. will continue to manufacture unloaders and feeding automation equipment. Harvestore's headquarters offices are in Arlington Heights, Ill.

HARDWOOD

A standard cord of dry, dense hardwood weighs about 4,000 pounds and provides as much heat as 2,000 pounds of coal, 150 to 175 gallons of number 2 fuel oil, or 24,000 cubic feet of natural gas

Sweet Bulky Makes Dairy Rations even Better

Sweet Bulky really knows how to impress today's dairyman It's ingredients, minerals, vitamins beet pulp, dehydrated alfalfa meal AND MOLASSES tell the story and, make the feed. It's sweet and bulky just like the name implies When mixed into dairy rations, Sweet Bulky increases feed intake because it makes feed taste better and makes it more digestible Wayne Sweet Bulky increases intake and, by so doing, increases production

Simmental Increase Noted

Registrations in American Simmental Association passed the 200,000 mark in January, 1975, an increase of 85.5 percent during the past year. Paid active memberships increased by 2,582 during the year, a gain of 65 percent.

Members attending ASA's 7th annual convention, February 22, at Houston's Astroworld Hotel were told that 1974 was a landmark year in many respects. "You completed and occupied your own national headquarters building, your trustees cut the advertising budget to allow substantial increases in the recording staff and in computer programming capability. We have improved member services significantly," executive secretary Don Vaniman told the convention.

Theme of the convention was "Grass-fed should be Simmental bred" and several speakers emphasized the European heritage of Simmental cattle. It was pointed out that grain has been high-priced and scarce in Europe for years, so Simmentals were selected for their ability to produce quality beef on roughage.

Lou Chesnut, a retired vice president of the Federal Land Bank of Spokane and a pioneer performance testing cattleman, was elected president of American Simmental. Chesnut operates a cattle and grain farm near Colfax, in eastern Washington. He has developed seedstock cattle of three breeds - Red Angus, Charolais and Simmental - and currently runs a herd of nearly 600 percentage and purebred Simmentals.

In his report, Vaniman said registrations had jumped from 105,334 head at the start of 1974, to 203,444 in February, 1975. Membership increased from 3,900 paid actives to 6,550 during the same period. "And the trend rolls on," Vaniman said. "With 197 of those new members joining in January of this year."

"We have registered 773 purebred Simmental bulls, imported from 10 countries, giving us a broad genetic base. We have a total of 1,351 purebred Simmental heifers registered. This is only a fraction of the 133 million cattle in the U.S. - if you think you're too late to get with Simmental you ought to think again. We've just begun to make an impact on this country's cattle population," Vaniman said.

Vaniman also reported that ASA has 54 full-time personnel in its national headquarters at Bozeman, Montana. ASA played an active role, he said, in forming a World Simmental Federation which is working to standardize pedigrees and performance reporting for all Simmentals, world-wide.

Vaniman credited the big increase in members and registrations to the performance of Simental cattle. Beyond that, he said progressive breed rules such as open artificial insemination, no color restrictions, and making performance records mandatory were appealing to hard-pressed cattlemen.

A third factor, he feels, is the special service which ASA offers its members, especially the Simmental Management Improver and Labor-saving Evaluation program (SMILE) which makes it practical to performance test all animals in the herd. "The program is free to members. Just identifying and culling one poor-producing cow will more than pay for your work," Vaniman concluded.

In addition to Chesnut, new officers include vice president - Dr. Don Applegate, Versailles, Kentucky, and treasurer - Jess Kilgore, Three Forks, Montana. Bobby Lawrence, Leesburg, Georgia and Ancel Armstrong, Manhattan, Kansas, were named to join the three officers on the executive committee.

New trustees, elected for three-year terms, are Colville Jackson, Gloster, Mississippi; Jim Woods, Chesterfield, Illinois; and Miles Davies, Deer Trail, Colorado.

Lincoln 4-H Club

Members of the Lincoln Community 4-H Club met on March 18 to reorganize for the coming year. Officers elected were: president - Kerry Boyd; vice-president - Audrey Augtsberger; secretary - Anita Augtsberger; treasurer - Allen Ackley; news reporter - Randy Martin; song leader - Kelly Ackley and game leaders - Kevin Smoker and Scotts Augtsberger. The next meeting will be held April 15 at the Mt. Airy Fire Hall.

Ortho Exec Sees Fertilizer Supplies Available But Tight

Some 65 growers heard about the outlook for agricultural chemicals last week during P. L. Rohrer & Bro., Inc. annual growers' night. A number of experts from Ortho division of Chevron met with the local farmers.

Max Maichele, Ortho agronomist, talked about making the best use of available fertilizer. Rob Hunt, the company's district representative for this area, talked about the importance of advance planning.

Roy Tuttle, a fertilizer expert from the company's home office in Toledo, discussed the industry-wide fertilizer situation. Tuttle's remarks are reproduced below:

The situation we are faced with now had it's beginning in the mid-sixties when feeding the hungry of the world became a crusade of ther fertilizer industry. Production capacity was expanded rapidly. By 1969, there was an excess of production as the world demand had not kept pace with forecasts. The fertilizer industry posted a loss of 160 million dollars that year. Again in 1970, the industry posted a loss of some 45 million dollars. In 1971, the prices of domestic fertilizers were frozen at levels unattractive to any investor. With no relief from controls in sight, many companies got out of the business. But then in early 1973, world demand gained momentum. The government began releasing additional crop acreages that have now reached 42 million. The demand for fertilizer went up dramatically, just at a time when a sick industry was starting to make a recovery. Large inventories were drawn down to almost zero. Natural gas, the essential element for making nitrogen, became scarce and expensive. Since the Federal Power Commission regulates interstate gas at the wellhead, prospective new producers have had to locate within the state where it is produced as, only then, does the free market price prevail. Such new sources of natural gas are over three times as expensive as gas under old controls. It is predicted this cost may increase from five to ten times as much as it was a few years ago.

Domestic fertilizer consumption is expected to go from 43 million tons to 60 million tons in the next seven years. Two new ammonia plants will come on stream in late 1975, and others are planned. However, they are limited by an inadequate supply of natural gas as a feedstock. Capacity will reach 20 million tons by 1977, up from 17.5 in 1974. This will not be sufficient to meet needs.

These new plants cost from three to four times as much as they did ten years ago. For example, a 1500 ton per day ammonia plant put on stream by Chevron in 1967 and costing $32 million would now cost over $110 million to build. Thus, with the difficulty in locating adequate, economical gas and the large sums of capital needed, it is believed the production will not meet need and nitrogen will remain in tight supply through the decade.

The phosphate picture is the brightest of the three elements, N, P, K. With added mine and processing equipment, the supply should run ahead through the 1980's on this product. The only factor which could cause this to fail to materialize is the shortage of electricity in Florida. The phosphate industry consumes 10 percent of all the electrical energy produced in Florida, while their ability to supply the load is marginal. The industry experienced 319 incidents of power outages this past year. My prediction is that we will have adequate supplies of phosphates after 1975.

The United States depends on Canada for 65 percent of its potash and, though Canadian production has been expended some since 1973, most expansion plans have been abandoned since the country imposed a heavy tax on outgoing potash and has announced the Canadian Government will be a 51 percent partner in any new or expanded venture.

Faced with no political support and no management control over new operations, most companies have cancelled plans to expand in the country. The vein of potash found in Saskatchewan lies at a 2,000 foot depth. The same deposit runs under the Dakotas, Wisconsin, and Michigan. The problem with mining is that, in Michigan, it lies at 9,000 feet under the surface. If it is ever mined, such a centure will be expensive and a long time in the development. Hydraulic mining is the only way it can be accomplished with out present knowledge.

Therefore, the long range for potash is for production to be less than demand. Prior to the release of price controls in October, 1973, the United States was exporting more fertilizer than it was importing.

After release from controls the U.S. began to compete for fertilizer on the world market (which is roughly twice as high as demostic prices) and by April, 1973, we became a net importer of fertilizer. The fiscal year 1973-74 saw imports exceed exports by 3.5 million tons. We still must export some fertilizer in order to receive others we need.

For example, we are dependent on Canada for potash and they in turn are dependent on us for phosphates. To embargo exports would surely result in like action taken against us. The short period in which our country stopped soybean shipments to Japan has resulted in an expansion of soybean production in Brazil which will no compete with us for years to come. Our grain exports contributed 11 billion dollars to our blance of payments last year and the dollar volume is expected to increase this year. We need fertilizer to help us grow the grain for economical food for our people and to use as a positive trade balance to offset petroleum and other products we must purchase outside our Country.

Farmers experienced a record net income of $32 billion in 1973, $27 billion in 1974, and the forecast is for $2 billion (the third largest in history) for 1975. With the long range outlook of strong demand for grains and expensive costs for natural

Ortho Sees

[Continued from Page 60]

gas, new construction, labor, taxes, etc., and the three years it takes to build new plants, we expect nitrogen to continue to be tight through 1980. This will happen even though the industry is planning expansion costing over 5 billion dollars in the next five years. Phosphates should come into balance in late 1975, provided Florida can generate sufficient electrical energy. Potash, because of the limited supply in this country and the restrictive policies of the Candian government, will probably be in short supply for years to come.

The picture for the spring of 1975 is this: Dealer inventories are high right now because manufacturers have been shipping it out to alleviate transportation difficulties expected during the spring rush. The corn belt has been unable to make much headway in winter application because of poor weather conditions. Manufacturers' inventories are very low, particularly on nitrogen. Because of the shortage of natural gas this winter, producers of ammonia (the basic source of nitrogen for most fertilizers) has tons of ammonia production has been lost because of natural gas curtailments this winter. Nitrogen is being imported into this country but is is costing almost double that of domestic supplies because buyers must complete on the world market for it.

I predict that, while there is fertilizer available today, during the planting season it will be very difficult to obtain supplies. The cost of imported nitrogen will probably go even higher as we get into the use period. The problem of just making enough shipments to keep up are getting bigger every day as railroads have continued to cut back service.

Money Management

Printed as a public service by the Lancaster Farming and the Pennsylvania Institute of Certified Public Accountants.

Selling a home for more than it cost produces a capital gain, on which a tax is levied. However, the tax can be delayed until future years if you reinvest within one year in a home costing at least as much as you got for the last one. If you build the new home, you have year and a half to do it. Those over 65 in some cases are exempt from the tax.

Machinery Meeting Held

Eugene Stoltzfus, agricultural mechanic, presented a program on Tractor and Baler Maintenance at a recent meeting of the Twin Valley Young Adult Farmers.

Mr. Stoltzfus discussed the proper inspection and maintenance procedures to use on the tractor engine's fuel, electrical, and cooling systems. Regular care and proper timing of the servicing can keep the tractor at peak efficiency and add years to its useful life. He explained that the complete, modern tractor also has a hydraulic power system that requires care and periodic attention also. Stoltzfus also described the proper brake and clutch adjustments, and gave the merits of fuel additives.

On baler maintenance, Mr. Stoltzfus emphasized the importance of greasing - the key to dependable service. He demonstrated the proper procedure for timing a baler and adjusting the bale size. With more demand of balers for corn stover, Stoltzfus showed how to prepare the baler for that rugged task.

Dependable Motor Co. of Honey Brook, provided the tractor and baler for the demonstration.

PUBLIC SALE

FARM MACHINERY, HOUSEHOLD GOODS, ANTIQUES

SATURDAY, MARCH 29, 1975

AT 10:00 A.M.

Located approx. 15 miles South of Lancaster off 272 East along Rawlingsville Ave. or off 222 at New Providence, West between New Providence and Truce or 1 mile North of Buck off 272

Egg Industry Is Seen Competitive In World Market

The International Trade Commission was told in Atlanta by United Egg Producers that America's shell egg industry can compete with any other free world country, without tariffs, provided governments of other countries do not subsidize production, processing, or marketing of eggs or fowl, and provided the foreign producers are subject to the same or similar standards of sanitation and inspection as U.S. producers.

John R. Pedersen, U.E.P. Director of Marketing and Statistical Analysis, appeared before the Commission which is investigating the possible economic effect of reducing or eliminating U.S. tariffs on imported products. The investigation is in preparation for the upcoming round of international trade negotiations. Hearings are being held in 14 cities across the United States.

"America's shell egg industry does not view import tariffs as a vital form of protection against the importation of shell eggs and fowl from foreign countries," Pedersen said. "At the present time, U.S. egg producers could easily compete at home and in international trade if all countries practiced the same free market system as the one in which we daily participate within the borders of the United States."

Pedersen cautioned, however, that there are numerous government and quasi-government programs operative worldwide to protect home production and eliminate competition from the U.S. farmers. He also noted that the rapidity with which the American dollar has been devalued and the emergency of a new world economy, the egg industry's competitive advantage gained through efficiency in production may not continue forever.

A detailed account of international trade problems faced by the egg industry in recent years which did not involve tariffs were presented to the Commission by Pedersen. The first, related the producers' dilemma of competing for feed supplies in the world market which included competition from foreign governments. Pedersen said that in June 1973 Spanish egg producers were obtaining U.S. soybean meal through their government at $125 per ton while U.S. producers were having to pay the world price of $359 per ton. The second example illustrated the Canadian egg producer marketing boards and their sales of surplus eggs in the U.S. market. U.E.P. estimated the Canadian sales in the U.S. caused $45.6 million damage to the domestic market.

"I cite these examples to illustrate to this Commission that apparently there are means of negating the effect of the established tariff schedules without violating current trade laws," Pedersen stated.

"Obviously, U.S. egg producers cannot participate in international trade against Spanish egg producers who are obtaining their feed supplies from their government at drastically reduced (subsidized) prices," he continued. "When this scheme is practiced, U.S. producers need the established tariffs to protect against the importation of eggs from these producers."

"Neither can our producers participate in international trade where groups of farmers are allowed to set minimum retail prices at home which cover the costs of losses sustained in international trade," Pedersen stated. "The 3.5 cents per dozen tarriff is of little consequence to such export programs."

Pedersen concluded his statement by reiterating the egg industry would be willing to practice free market world trade. "But," he added, "we question whether such a utopia - free-market international trade - can truly be accomplished."

Sales Report

Dairy Cattle
John and Rhoda Yost
Kinzers, Pa.
March 18, 1975

A large crowd attended Tuesday's sale with Ivan Yost as auctioneer and Robert H. Kauffman handling pedigrees. 39 milking cows with 8 calves under three months averaged $1324; 25 animals sold over $1000; 72 animals averaged $996 with the total being $71,700. The top selling animal was Spring-Lea Apollo Lucy Lisa which sold for $5550 to Clover Will Farm in Williamsburg, Pa. A full sister sold for $2600 to Allen Bros from Jefferson, MD. Top purchaser for the day was Marshman and Sons from Oxford, New York. The sale was managed by Ivan Yost and Robert H. Kauffman.

Weaver's ad in this issue.)

Pa. Potato Stocks 52 pct. Above '74

Pennsylvania potatoes in storage on March 1, 1975 totaled 1,600,000 cwt. - 29 percent below the previous month but 52 percent above the 1,050,000 cwt. in storage a year ago, according to The Pennsylvania Crop Reporting Service. Stocks consist of potatoes held for all uses by growers, local dealers and processors. Disappearance (sales, home use, shrinkage, etc.) to March 1 from time of harvest is 5,760,000 cwt. compared with 5,250,000 cwt. for the comparable period a year earlier. The 1974 crop of 7,360,000 cwt. was 17 percent above the 6,300,000 cwt. produced in 1973.

Nationwide, stocks of potatoes for all uses held in storage by growers, local dealers and processors in the fall production areas totaled a record 102.3 million cwt. on March 1, 1975. This was 21.1 million cwt. more than the 81.2 million cwt. on hand March 1, 1974 and 4 percent above the previous record March 1 stocks of 1972.

Disappearance from the 1974 fall crop to March 1, 1975 totaled 182.3 million cwt., 6 percent more than the 172.7 million cwt. moved during the comparable period a year earlier. For the eight easter States, March 1, 1975 stocks totaled 21.6 million cwt., up 40 percent from the 15.5 million on hand a year earlier.

Stocks in the eight central States on March 1, 1975 totaled 17.8 million cwt., 28 percent above the 14.0 million cwt. in storage a year earlier. In the Red River Valley of North Dakota and Minnesota, quality remains variable with "cull-out" running well above average.

AGWAY

How long 'til Squealer time?

Agway Squealer. And how little pigs do love it! So weaning isn't much of a problem any more. Just give them a taste of Squealer and that's it.

That's why Squealer is the fastest-growing feed in the Agway Swine feed line-up. Try Agway Squealer on your next litter and see the difference.
